

## Esmya

### Procedural steps taken and scientific information after the authorisation

| Application number | Scope  | Opinion/ Notification <sup>1</sup> issued on | Commission Decision Issued <sup>2</sup> / amended on | Product Information affected <sup>3</sup> | Summary  |
|--------------------|--|--|--|---|--|
| A20/0043           | Pursuant to Article 20 of Regulation (EC) No 726/2004, the European Commission requested on 30 November 2017 the opinion of the European Medicines Agency after serious cases of liver injury associated with the use of Esmya were reported, including some leading to liver transplantation. In addition, a preliminary assessment of the available data was performed by the EMA Pharmacovigilance Risk Assessment Committee (PRAC), to consider if | 08/02/2018                                   | 16/02/2018   | SmPC, Annex II, PL                        | Please refer to the assessment report on provisional measures:<br><br>Esmya EMEA/H/A-20/1460/C/2041/0043 |

<sup>1</sup> Notifications are issued for type I variations and Article 61(3) notifications (unless part of a group including a type II variation or extension application or a worksharing application). Opinions are issued for all other procedures.

<sup>2</sup> A Commission decision (CD) is issued for procedures that affect the terms of the marketing authorisation (e.g. summary of product characteristics, annex II, labelling, package leaflet). The CD is issued within two months of the opinion for variations falling under the scope of Article 23.1a(a) of Regulation (EU) No. 712/2012, or within one year for other procedures.

<sup>3</sup> SmPC (Summary of Product Characteristics), Annex II, Labelling, PL (Package Leaflet).

The study evaluated the efficacy and safety in women who received 8 courses of a 10 mg dose of ulipristal. A total of 64 women started the treatment, 53 of which completed the study. There were no new safety findings and the efficacy was comparable to what had been previously reported. The incidence of endometrial hyperplasia with this increased exposure did not increase in 43 women who received up to 8 courses of ulipristal acetate 10 mg.</p> |

| PSUV/0021 | Periodic Safety Update   | 06/03/2014 | n/a        |                       | PRAC Recommendation - maintenance   |
| II/0019   | <p>Update of sections 4.1, 4.2, 4.3, 4.4, 4.8 and 5.1 of the SmPC based on two completed studies which investigated the safety and efficacy of up to four 3-month treatment courses of ulipristal acetate 10 mg. The limitation of a single 3-month treatment course has been removed and the prescription of a second 3-month treatment course has been allowed. In addition, "alopecia" and "dry skin" have been included in the "uncommon" category of section 4.8 of the SmPC.</p> <p>The Package Leaflet was proposed to be updated accordingly.</p> <p>The requested variation proposed amendments to the Summary of Product Characteristics, Annex II and Package Leaflet.</p> <p>C.I.6.b - Change(s) to therapeutic indication(s) - Deletion of a therapeutic indication</p> | 21/11/2013 | 18/12/2013 | SmPC, Annex II and PL | <p>Further to the results of PGL09-027 and PGL09-026 studies (respectively PEARL III extension and PEARL III) the limitation of a single 3-month treatment course was removed and a second 3-month treatment course is allowed if deemed appropriate by the treating physician. This second 3-month treatment course should be separated from the first treatment course by a drug-free interval to allow return of menstruation and shedding of the endometrium. The treatment should not exceed two treatment courses of 3 months due to the lack of long term safety data. Sections 4.1, 4.2, 4.3, 4.4, 4.8 and 5.1 of the SmPC were updated to reflect the new data. The PL was updated accordingly.</p> <p>In addition, the key elements of the educational material were amended to reflect a) the revised posology: 5 mg tablet once daily for up to 3 months. This 3-month treatment course can be repeated once. Re-treatment should start at the earliest during the second menstruation following the first treatment course completion. Treatments should always be started during the first week of menstruation, and b) absence of safety data on the endometrium for continuous treatment longer than 3 months</p> |
| II/0014   | Update of sections 4.4, 4.5 and 5.3 of the SmPC based on one clinical study conducted to assess potential drug-drug interactions with rifampicin, one pharmacokinetic study to assess the pharmacokinetics of ulipristal acetate in subjects with  | 24/10/2013 | 18/12/2013 | SmPC and PL           | Based on the studies submitted by the MAH, section 4.4 of the SmPC was amended to state that the concomitant use of ulipristal acetate and potent CYP3A4 inducers (e.g. rifampicin, rifabutin, carbamazepine, oxcarbazepine, phenytoin, fosphenytoin, phenobarbital, primidone, St  |

|           |  |            |     |  |  |
|-----------|--|------------|-----|--|--|
|           | <p>moderate hepatic impairment and two non-clinical carcinogenicity studies. The Package Leaflet was proposed to be updated accordingly.</p> <p>Furthermore, the MAH proposed this opportunity to bring the PI in line with the latest QRD template version 9.1 and to assign a new pharmacotherapeutic group for the medicinal product according to WHO.</p> <p>The requested variation proposed amendments to the Summary of Product Characteristics and Package Leaflet.</p> <p>C.I.4 - Variations related to significant modifications of the SPC due in particular to new quality, pre-clinical, clinical or pharmacovigilance data</p> |            |     |  | <p>John's wort, efavirenz, nevirapine, long term use of ritonavir) is not recommended.</p> <p>Section 4.5 of the SmPC was amended to state that administration of the potent CYP3A4 inducer rifampicin (300 mg twice daily for 9 days) to healthy female volunteers markedly decreased C<sub>max</sub> and AUC of ulipristal acetate and its active metabolite by 90 % or more and decreased ulipristal acetate half-life by 2.2-fold corresponding to an approximately 10-fold decrease of ulipristal acetate exposure. Concomitant use of ulipristal acetate and potent CYP3A4 inducers (e.g. rifampicin, rifabutin, carbamazepine, oxcarbazepine, phenytoin, fosphenytoin, phenobarbital, primidone, StJohn's wort, efavirenz, nevirapine, long term use of ritonavir) is not recommended.</p> <p>Section 5.3 of the SmPC was amended to include information related to carcinogenicity studies (in rats and mice) showing that ulipristal acetate is not carcinogenic.</p> <p>Finally, the PI was brought in line with the latest QRD template version 9.1 and a new pharmacotherapeutic group was assigned for the medicinal product, according to WHO.</p> |
