

EMA Shortages Workshop: the EAHP perspective

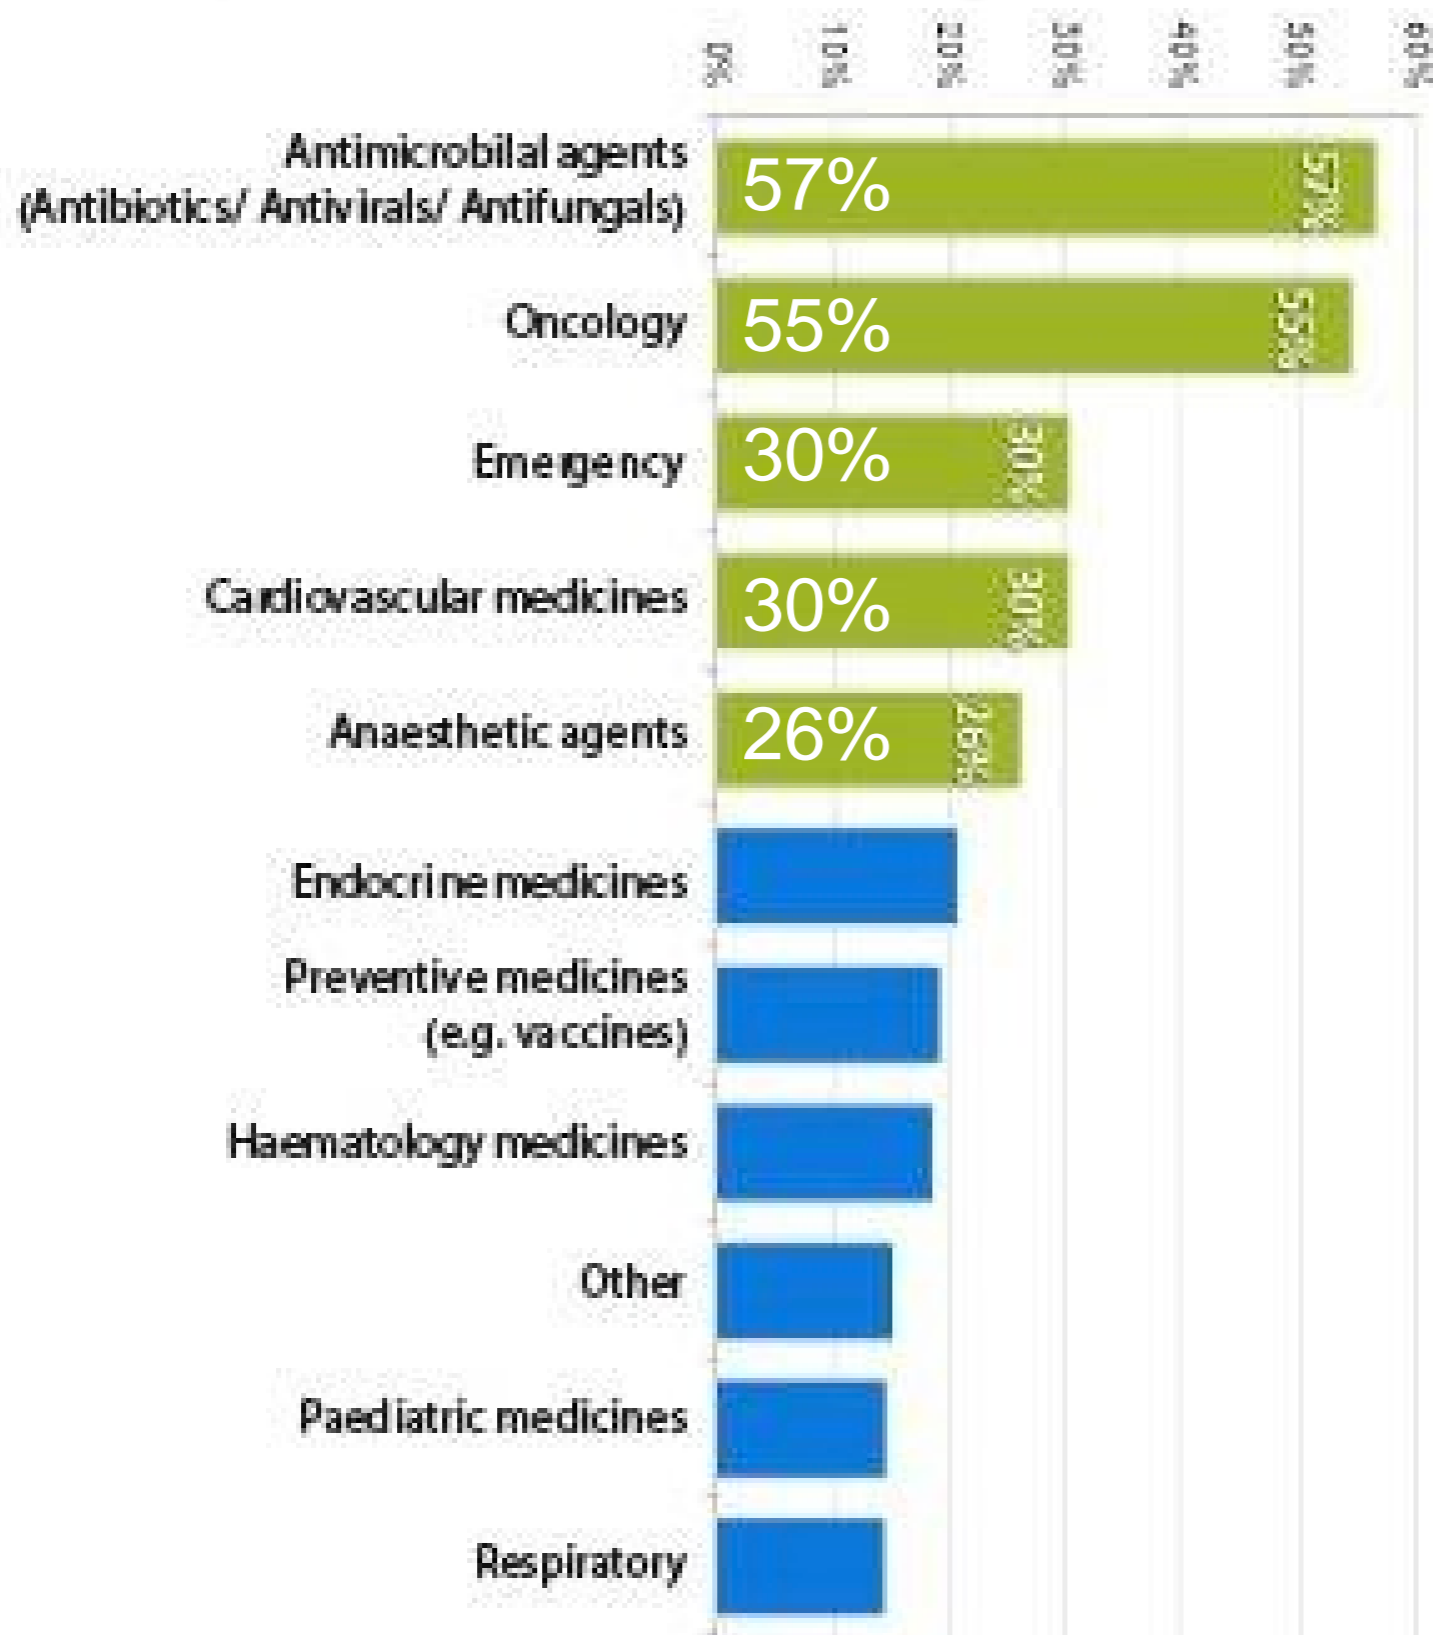

86% of respondents say medicines shortages are a current problem in the hospital they work in, in terms of delivering the best care to patients and/or operating the hospital pharmacy

66% of all respondents are affected on a daily or weekly basis

In which area of medicine does your hospital experience shortage most commonly?

- Corresponds with 2013 survey results with oncology, emergency medicines and cardiovascular medicines featuring highly
- New categories with high response in 2014 survey: antimicrobials and anesthetic agents due to inclusion following 2013 feedback

In your experience, how long would you estimate the average or typical medicines shortage normally lasts for?

Do you agree with the statement “medicines shortages in my hospital are having a negative impact on patient care”

Definitions: We need to speak the same language!

The Common Position Paper of 45 patient and HCP stakeholder organisations	A supply shortage of medicine may be defined, as “a situation in which the total supply of an authorised medicine or of a medicine used on a compassionate basis is inadequate to meet the current or projected demand at the patient level. The shortage may be local, national, European or international”
European Medicines Agency	A definition for inclusion on the EMA shortages catalogue are those,” medicine shortages that affect or are likely to affect more than one European Union (EU) Member State, where the European Medicines Agency has assessed the shortage and provided recommendations to patients and healthcare professionals across the EU.”
The European Federation of Pharmaceutical Industries and Associations (EFPIA)	EFPIA have previously proposed the definition of a drug shortage as “A crisis situation caused by the inability of any Marketing Authorisation Holder to supply a drug with a specific Active Pharmaceutical Ingredient to a market over an extended period of time resulting in the unavailability of this medication for patients.”
International Pharmaceutical Federation (FIP)	“A medicine shortage can be defined as a drug supply issue requiring a change. It impacts patient care and requires the use of an alternative agent
American Society of Health System Pharmacists (ASHP)	“A supply issue that affects how the pharmacy prepares or dispenses a drug product or influences patient care when prescribers must use an alternative agent
USA’s FDA	“A situation in which the total supply of all clinically interchangeable versions of an FDA-regulated drug is inadequate to meet the current or projected demand at the user level.”
Health Canada	“A drug shortage is a situation when a manufacturer or importer of a drug cannot meet actual or projected demand. Drug shortages can include temporary disruptions or permanent discontinuances in the production and supply of a drug

Communication: Good practice is out there!

Liste des médicaments à usage humain et vétérinaire indisponibles 8/10/2015

Drug Shortages

Welcome to the ASHP Drug Shortages Resource Center, the first stop for information and resources on drug product shortages and management. Drug shortages can adversely affect drug therapy, compromise or delay medical procedures, and result in medication errors. ASHP and its partners work to keep the public informed of the most current drug shortages.
