# Experience with the R&D stakeholder platform

---

5th Industry Stakeholder Platform on R&D support

16 November 2020

Presented by Michael Berntgen  
Head of Scientific Evidence Generation Department

An agency of the European Union

# Evolution of the industry stakeholder platform on research and development support

Since its inception, four R&D platform meetings were held:

[1st R&D platform meeting - 25.04.2017](#)

[2nd R&D platform meeting - 15.11.2017](#)

[3rd R&D platform meeting - 18.05.2018](#)

[4th R&D platform meeting - 23.11.2018](#)

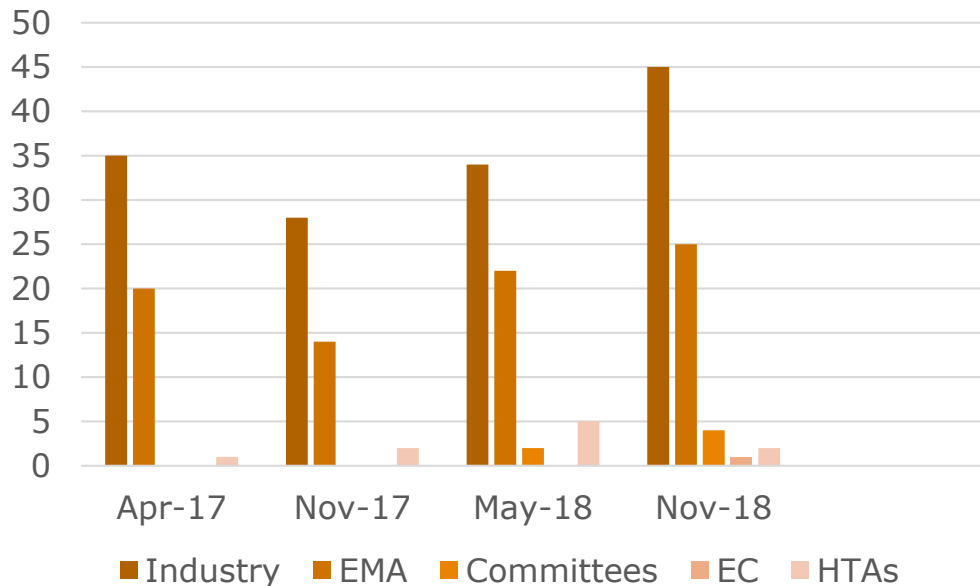

(note: platforms were paused in 2019 due to business continuity considerations)

Scope: all areas of product-development support, from scientific advice, through specifics for paediatric and orphan medicines, to innovation support

Focus: general updates and more focused discussions on specific processes or issues to support continuous improvement

Transparency: Highlight reports and EMA presentations published on the website

## Participants at the platform meetings

- Aim to maintain a constructive working environment:
  - Industry associations coordinate their participants
  - EMA contributors depending on the agenda items
- Committee chairs as well as European Commission invited
- Additional attendees possible (e.g. HTA bodies)

## Topics for the platform discussion

- Usually 8 topics on the agenda of a 1-day meeting, of which 4-5 are for detailed discussion and the remainder shorter updates
- Scope is either related to regulatory review processes [N=19] or more general evidence generation approaches (e.g. real world evidence, digital technologies) [N=10]; rarely pure operational topics are discussed
- Break-out sessions on conceptual topics were tried at the last meeting

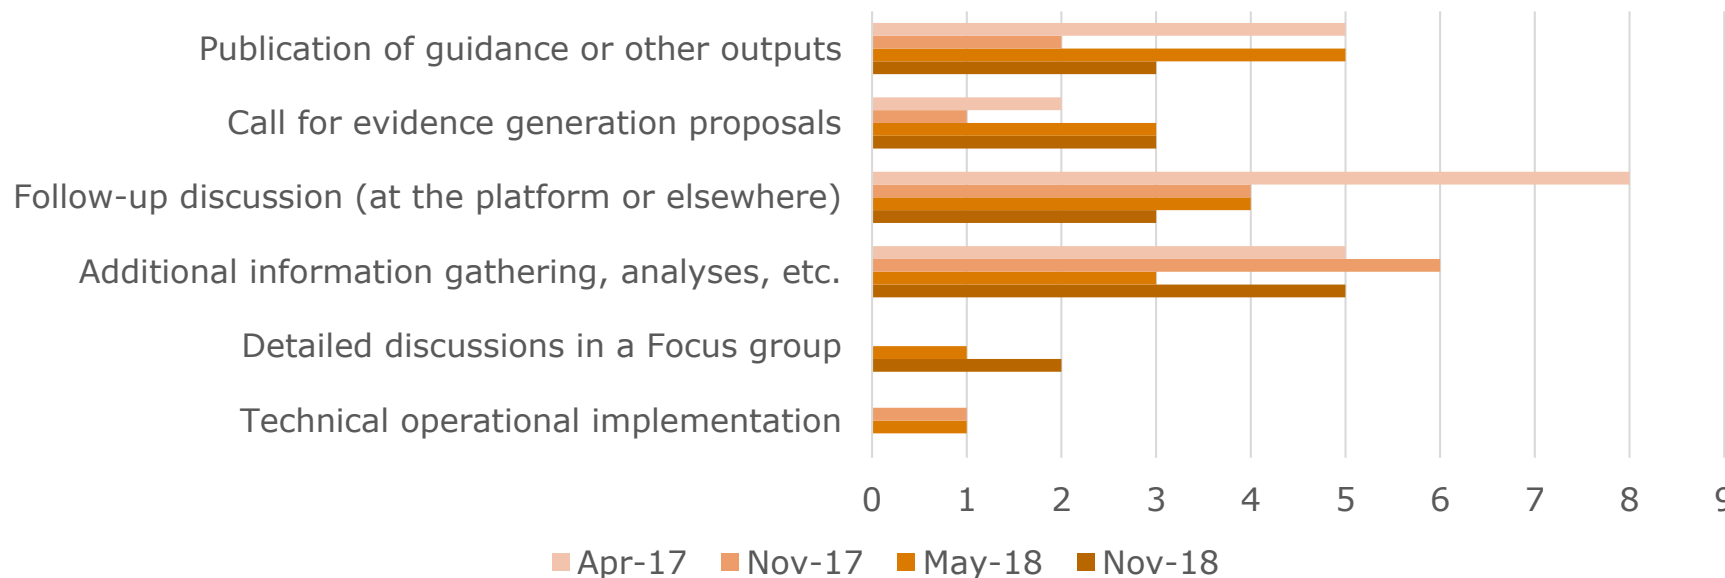

### Regulatory review processes

- Scientific advice
- Orphan Designation
- Paediatric plan
- PRIME scheme

# Follow-up actions from the discussions

# Focus group “Post-licensing/launch evidence generation”

## Objectives:

- To identify issues and barriers to seeking scientific advice on PLEG, and discuss potential solutions.
- To discuss several key areas in the context of seeking scientific advice on PLEG including approaches for questions on which scientific advice is sought.

## Output:

REVIEW | Open Access |

Regulatory and health technology assessment advice on postlicensing and postlaunch evidence generation is a foundation for lifecycle data collection for medicines

Jane Moseley , Spiros Vamvakas, Michael Berntgen, Alison Cave, Xavier Kurz, Peter Arlett, Virginia Acha, Simon Bennett, Catherine Cohet, Solange Corriol-Rohou, Emma Du Four ... [See all authors](#)

First published: 11 March 2020 | <https://doi.org/10.1111/bcp.14279>

***Advice involving different decision makers aims to optimise the PLEG plan to address remaining uncertainties after licensure and launch***

# Focus group “Qualification of digital technologies”

## Objectives:

- To summarise circumstances where digital technologies are expected to enable some steps of the product development process
- To describe the scope and process of a digital technology’s qualification procedure
- To develop points to consider for the preparation of a high-quality request for qualification dossier

## Output:

Digital technologies for medicines:  
shaping a framework for success

*Francesca Cerreta<sup>1</sup>, Armin Ritzhaupt<sup>1</sup>, Thomas Metcalfe<sup>2</sup>, Scott Askin<sup>3</sup>, João Duarte<sup>4</sup>, Michael Berntgen<sup>1</sup> and Spiros Vamvakas<sup>1</sup>*

Regulatory agencies can provide advice to support developers of digital technologies for medicines use, but what are the best strategies to maximize the chance of a successful regulatory interaction? Here, EMA and industry representatives comment on the experience so far.

Questions and answers: Qualification of digital  
technology-based methodologies to support approval of  
medicinal products

Status as of June 2020

[Qualification of digital technology-based methodologies](#)

# Focus group “Integrated R&D product support”

## Objectives:

- To map current interaction opportunities, and how they are being used in practice
- To describe principles and limitations of such interactions
- To develop ideas to ensure a continuum of interactions along the development life-cycle including relevant enablers and boundaries

## Output:

- 1/ Analysis of **existing engagement platforms** describing their use in development programmes, strengths/limitations as well as familiarisation from developer’s perspective
  - Basis for further EMA communication material
- 2/ **Multi-stakeholder discussion** at DIA Europe
- 3/ Establishment of **design principles** for enhancing the development support ecosystem
  - Discussed in session 3 “Evolution of the scientific advice framework”

## Take home messages

- The European regulatory system is constantly evolving in scientific, regulatory and technical aspects relevant for medicines development and evaluation
- The R&D stakeholder platform has been established as a collaborative forum for progressing relevant topics in terms of development support from regulatory perspective, and beyond, as well as evidence generation concepts
- Achievements from the R&D platform can contribute to the implementation of strategies such as the RSS to 2025 as well as the EMAN strategy
