Small companies and academia need a different kind of regulatory support

- Make it easier for innovators to do things right from the beginning of the development process
- Reduce uncertainty in the interpretation of the regulatory frameworks
- Reduce time to approval of medical products
 - complete applications with relevant data and information - and no hiccups along the way

approvals • authorisation • olinical trials • communication • competence • cosmtics • dialogue • directives • efficacy • environment • evaluation • guidelines • harmonisation • health economics • herbals • homeopathics • information • inspection laboratory analysis • market surveillance • medicinal products • medical devices • narcotics • public health • quality • registration • regulations • reliability • risk/benefit • safety • scientific • standardisation • transparency • vigilance • approvals • authorisation • clinical trials • communication • competence • cosmetics • dialogue • directives • efficacy • environment • evaluation • approvals • authorisation • clinical trials • communication • competence • cosmetics • dialogue • directives • efficacy • environment • evaluation • approvals • authorisation • linical trials • communication • competence • cosmetics • dialogue • directives • efficacy • environment • evaluation • harmonisation • health • herbals • homeopathics • information • inspection laboratory analysis • market surveillance • medicinal products • medical devices • public health

The Innovation Office

- Being a simple and clear contact to the MPA
- **Stronger visibility** of MPA services related to innovation
- Increase regulatory knowledge
- Furthering availability to regulatory and scientific advice to innovators
 - especially micro- and SME's
