2 EMA/CHMP/PKWP/36869/2015
3 Committee for Medicinal Products for Human Use (CHMP)

4 **Sitagliptin film-coated tablets 25, 50 and 100 mg**
5 **product-specific bioequivalence guidance**
6 **Draft**

Draft Agreed by Pharmacokinetics Working Party	April 2015
Adoption by CHMP for release for consultation	25 June 2015
Start of public consultation	15 July 2015
End of consultation (deadline for comments)	1 November 2015

Keywords	<i>Bioequivalence, generics, sitagliptin</i>
-----------------	-----------------------------------------------------

10 Sitagliptin film-coated tablets 25, 50 and 100 mg product-specific bioequivalence
11 guidance
12

13 Disclaimer:

14 *This guidance should not be understood as being legally enforceable and is without prejudice to the need to ensure that the data submitted in support of a*
15 *marketing authorisation application complies with the appropriate scientific, regulatory and legal requirements.*

16

17 Requirements for bioequivalence demonstration (PKWP)*

BCS Classification**	BCS Class: <input checked="" type="checkbox"/> I <input type="checkbox"/> III <input type="checkbox"/> Neither of the two Background: sitagliptin is a high solubility compound with complete absorption.
BE Study design <i>in case a BCS biowaiver is not feasible or applied</i>	single dose
	cross-over
	healthy volunteers
	<input checked="" type="checkbox"/> fasting <input type="checkbox"/> fed <input type="checkbox"/> both <input type="checkbox"/> either fasting or fed
	Strength: 100 mg Background: highest strength recommended. However, it is also possible to use the lower strengths for a drug with linear pharmacokinetics and high solubility.

	Number of studies: one single dose study
Analyte	<input checked="" type="checkbox"/> parent <input type="checkbox"/> metabolite <input type="checkbox"/> both
	<input checked="" type="checkbox"/> plasma/serum <input type="checkbox"/> blood <input type="checkbox"/> urine
	Enantioselective analytical method: <input type="checkbox"/> yes <input checked="" type="checkbox"/> no
Bioequivalence assessment*	Main pharmacokinetic variables: AUC_{0-t} , C_{max}
	90% confidence interval: 80.00 – 125.00%

18 * As intra-subject variability of the reference product has not been reviewed to elaborate this product-specific bioequivalence guideline, it is not possible to
19 recommend at this stage the use of a replicate design to demonstrate high intra-subject variability and widen the acceptance range of C_{max} . If high intra-
20 individual variability ($CV_{intra} > 30\%$) is expected, the applicants might follow respective guideline recommendations.

21 ** This tentative BCS classification of the drug substance serves to define whether *in vivo* studies seems to be mandatory (BCS class II and IV) or, on the
22 contrary, (BCS Class I and III) the Applicant may choose between two options: *in vivo* approach or *in vitro* approach based on a BCS biowaiver. In this latter
23 case, the BCS classification of the drug substance should be confirmed by the Applicant at the time of submission based on available data (solubility
24 experiments, literature, etc.). However, a BCS-based biowaiver might not be feasible due to product specific characteristics despite the drug substance being
25 BCS class I or III (e.g. *in vitro* dissolution being less than 85 % within 15 min (BCS class III) or 30 min (BCS class I) either for test or reference, or
26 unacceptable differences in the excipient composition).
