

COMMITTEE FOR VETERINARY MEDICINAL PRODUCTS

RECOMMENDATION FOR THE INCLUSION IN ANNEX II OF COUNCIL REGULATION (EEC) 2377/90 OF

SUBSTANCES WITH AN E NUMBER

1. Considering that some substances were previously evaluated through European Union procedures, such as the Scientific Committee for Food;
2. Considering that some of these substances were considered to be acceptable for addition to human foodstuffs and granted an E number;
3. Considering that their administration to food producing animals as part of veterinary medicinal products is unlikely to result in residues in food of animal origin at concentrations exceeding those found in food where they have been added directly;
4. The Committee for Veterinary Medicinal Products recommends that those substances approved as additives in foodstuffs for human consumption, with a valid E number, should be included into Annex II of Council Regulation (EEC) 2377/90 for use in all food producing species.

Substances with an E number

Pharmacologically active substances	Animal species	Other provisions
Substances with an E number	All food producing species	Only substances approved as additives in foodstuffs for human consumption, with the exception of preservatives listed in Part C of Annex III of Directive 95/2/EC.

The present opinion is forwarded to the Commission, the Member States competent authorities and to the applicants.

London, 28 September 1995

Prof. Dr. Kroker,
Chairman on behalf of the CVMP
