

## Notification of discontinuation of a paediatric development which is covered by an agreed PIP Decision<sup>i</sup>

Actives substance(s):

Grass pollen allergen extract from Dactylis glomerata L., Anthoxanthum odoratum L., Lolium perenne L., Poa pratensis L. and Phleum pratense L.

Latest Decision number(s): 1) P/22/2011

Corresponding PIP number(s): 1) EMEA-000976-PIP01-10

If the PIP has been submitted as part of a marketing authorisation application in order to comply with the requirements of Article 7 of the Paediatric Regulation (as a condition of the validation of the respective application) and a marketing authorisation was granted based on this application, then there is a legal obligation to complete that PIP. The same applies if there has been a successful post-authorisation application, where the PIP was included in order to comply with the requirements of Article 8 of the Paediatric Regulation.

Please confirm if any of the above applies:

Yes  No

If yes, it means that based on the Marketing Authorisation obtained at the end of that initial procedure or the successful post-authorisation application, as applicable, you are obliged to complete that PIP. That obligation cannot be cancelled by a unilateral decision, including by withdrawing the MA. Such PIP must be completed, unless it is modified in agreement with the PDCO by removing all outstanding PIP measures or granting a full product-specific waiver instead (upon relevant circumstances in accordance with the Paediatric Regulation). Non-completion of a binding PIP establishes noncompliance with the requirements of the Paediatric Regulation, which the European Medicines Agency has an obligation to report to the European Commission.

Please note that development of the medicinal product above in the following

### **condition(s)/indication(s):**

Treatment of allergic rhinitis / rhino-conjunctivitis

has been discontinued

for the following reason(s): (tick all that apply)

- (possible) lack of efficacy in adults
- (possible) lack of efficacy in children
- (possible) unsatisfactory safety profile in adults
- (possible) unsatisfactory safety profile in children
- commercial reasons (please specify: No marketing interest for Staloral Gräser in Germany)
- manufacturing / quality problems

other regulatory action (please specify: )

other reason (please specify: )

Please add a brief description (max 2000 characters) of the reason(s) for the discontinuation:

The submission of the PIP was triggered by the enactment in 2010 of the Regulation for Therapy Allergens in Germany, requiring that "Named-Patient products" for the treatment of the most prevalent allergies to have a marketing authorization (MA) – (Therapie Allergene-Verordnung/Therapy Allergens Ordinance). Indeed, in accordance with the European paediatric regulations, submission in Germany required a preliminary PIP approval

However, in 2012, Stallergenes Greer decided to withdraw the Marketing Authorizations application of STALORAL Gräser in Germany for commercial reasons (no safety, quality or efficacy issue triggered this decision), and then to not finalize the corresponding PIP.

Date: 29 October 2025
