

Notification of discontinuation of a paediatric development which is covered by an agreed PIP Decisionⁱ

Actives substances(s): Inclacumab

Latest Decision number(s): 1) P/0545/2022

Corresponding PIP number(s): 1) EMEA-003219-PIP01-22

If the PIP has been submitted as part of a marketing authorisation application in order to comply with the requirements of Article 7 of the Paediatric Regulation (as a condition of the validation of the respective application) and a marketing authorisation was granted based on this application, then there is a legal obligation to complete that PIP. The same applies if there has been a successful post-authorisation application, where the PIP was included in order to comply with the requirements of Article 8 of the Paediatric Regulation.

Please confirm if any of the above applies:

Yes No

If yes, it means that based on the Marketing Authorisation obtained at the end of that initial procedure or the successful post-authorisation application, as applicable, you are obliged to complete that PIP. That obligation cannot be cancelled by a unilateral decision, including by withdrawing the MA. Such PIP must be completed, unless it is modified in agreement with the PDCO by removing all outstanding PIP measures or granting a full product-specific waiver instead (upon relevant circumstances in accordance with the Paediatric Regulation). Non-completion of a binding PIP establishes noncompliance with the requirements of the Paediatric Regulation, which the European Medicines Agency has an obligation to report to the European Commission.

Please note that development of the medicinal product above in the following **condition(s)/indication(s)**:

Treatment of sickle cell disease

has been discontinued

for the following reason(s): (tick all that apply)

- (possible) lack of efficacy in adults
- (possible) lack of efficacy in children
- (possible) unsatisfactory safety profile in adults
- (possible) unsatisfactory safety profile in children
- commercial reasons (please specify:)
- manufacturing / quality problems
- other regulatory action (please specify:)
- other reason (please specify:)

Please add a brief description (max 2000 characters) of the reason(s) for the discontinuation:

On 15 August 2025, Pfizer Inc. announced results from the Phase 3 THRIVE-131 study evaluating inclacumab, an investigational P-selectin inhibitor, in patients 16 years of age and older with sickle cell disease (SCD). The study did not meet its primary endpoint of significant reduction in the rate of vaso-occlusive crises (VOCs) in participants receiving inclacumab versus placebo every 12 weeks over 48 weeks. Inclacumab was generally well tolerated in THRIVE-131.

The development of inclacumab for the treatment of sickle cell disease has therefore been discontinued, including in the paediatric population.

Date: 8 October 2025
