

Notification of discontinuation of a paediatric development which is covered by an agreed PIP Decisionⁱ

Actives substances(s): rocatinlimab

Latest Decision number(s): 1) EMA/PE/0000273488

Corresponding PIP number(s): 1) EMA/PE/0000273488

If the PIP has been submitted as part of a marketing authorisation application in order to comply with the requirements of Article 7 of the Paediatric Regulation (as a condition of the validation of the respective application) and a marketing authorisation was granted based on this application, then there is a legal obligation to complete that PIP. The same applies if there has been a successful post-authorisation application, where the PIP was included in order to comply with the requirements of Article 8 of the Paediatric Regulation.

Please confirm if any of the above applies:

Yes ☐ No ☒

If yes, it means that based on the Marketing Authorisation obtained at the end of that initial procedure or the successful post-authorisation application, as applicable, you are obliged to complete that PIP. That obligation cannot be cancelled by a unilateral decision, including by withdrawing the MA. Such PIP must be completed, unless it is modified in agreement with the PDCO by removing all outstanding PIP measures or granting a full product-specific waiver instead (upon relevant circumstances in accordance with the Paediatric Regulation). Non-completion of a binding PIP establishes noncompliance with the requirements of the Paediatric Regulation, which the European Medicines Agency has an obligation to report to the European Commission.

Please note that development of the medicinal product above in the following **condition(s)/indication(s)**:

Treatment of atopic dermatitis

☒ has been discontinued

for the following reason(s): (tick all that apply)

☐ (possible) lack of efficacy in adults

☐ (possible) lack of efficacy in children

☒ (possible) unsatisfactory safety profile in adults

☒ (possible) unsatisfactory safety profile in children

☐ commercial reasons (please specify:)

☐ manufacturing / quality problems

☐ other regulatory action (please specify:)

☐ other reason (please specify:)

Please add a brief description (max 2000 characters) of the reason(s) for the discontinuation:

Following a comprehensive review of emerging safety data from the Phase 3 clinical program for rocatinlimab in atopic dermatitis, which included identification of malignancy as a potential risk, Amgen and Kyowa Kirin decided to immediately stop all ongoing clinical trials with rocatinlimab.

This decision was based on the totality of evidence, including Phase 3 clinical data, cumulative Global Safety Database review, mechanistic plausibility related to OX40 pathway modulation, and comparison of epidemiological background rates with clinical data.

It has been concluded that the potential risks associated with rocatinlimab treatment may outweigh the benefits for the studied patient populations and as such, all development with rocatinlimab in these populations has been discontinued.

Date: 15 May 2026
