## Risk management plan (RMP): questions and answers

[Email](#) [Print](#) [Help](#) [Share](#)

**This page is intended to provide advice to Marketing Authorisation Holders of centrally authorised medicinal products about procedural and regulatory aspects to the Risk Management Plan (RMP) lifecycle during the post authorisation phase. It addresses the classification of changes to the RMP, submission requirements and aspects to be considered in the management of parallel procedures affecting RMP. Revised topics are marked 'New' or 'Rev.' upon publication.**

## When should I submit an RMP (update)?

- Strictly speaking, whenever any element of the RMP is affected
- In case of a significant change to the safety profile, typically
  - New dosage form or new route of administration
  - New manufacturing process for biotechnologically-derived medicinal products
  - New indication (or significant change to current indication)
  - Clinically important changes to PI (e.g. new contraindication or warning/precaution for use)
  - New additional risk minimisation measures (or changes to existing ones)
  - Updates to Annex II conditions, PhV plan studies or PAES
- At the request of the Agency

# When is my RMP update a stand-alone variation?

- As a general rule, when submitted on its own
- Common scenarios
  - In follow-up to changes recommended in a prior procedure
  - In follow-up to PSUR when RMP was not allowed to be submitted with the PSUR
  - To introduce changes to studies in the pharmacovigilance plan (sometimes in follow-up to a protocol assessment in a post-authorisation measure (PAM))

## What if I don't submit an RMP (update)? – Pending updates

- If not submitted but warranted, an RMP update may be requested during assessment
  - The RMP update should normally occur within the procedure
  - In certain cases, the changes may be submitted as part of a subsequent RMP update
- Similarly, in case of submitted RMP update and upon request of further changes during the assessment
  - The finalisation of the RMP update should normally occur within the procedure
  - In certain cases, the changes may be submitted as part of a subsequent update
- Pending updates create a backlog upon implementation

# Which variation classification will apply for my RMP updates?

- Type II variation C.I.11.b
  - New RMP
  - Changes to Annex II conditions (except isolated change in final due date)
  - Changes to safety concerns
  - Changes to category 3 studies (except isolated change in final due date)
- Type IA variation C.I.11.a
  - Previously agreed changes including the actual wording and no linguistic review for PI
- Type IB variation C.I.11.z **(no default RMP changes under this category)**
  - RMP submission not qualifying for type II or IA variation
  - Isolated changes in final due dates
  - Changes previously agreed without pre-agreement of the actual wording

## Which changes can be included in an RMP update without the need for an additional variation?

- Minor administrative changes
- Update to new template
- (non-clinical/clinical/post-marketing) Exposure information
- Changes to category 4 studies
- **Any minor change which would, on its own, only trigger a type IA or IB variation**

## Can I group my RMP updates?

- RMP update in multiple variations does not suffice in principle to prompt grouping of them
- It is likely that the variations may fulfill the grouping criterion of 'making sense to assess together' (e.g. clinical safety variations **but not** non-clinical and clinical safety variation)
- Grouping should not delay implementation of important changes (typically, extension of indication should not be grouped with safety variations)
- Multiple major (type II) variations can be combined into a **grouped** variation
- Multiple minor (type I) variations can be combined into a **single** variation

## Handling of proposed changes - example

Submission of a final study report for a category 3 study in the RMP via a type II variation C.I.13 with consequential and/or other updates of the RMP, such as:

Deletion of this study in the RMP – no need for separate variation since related to the main application;

Addition of a safety concern in the RMP following request from the PRAC as part of a PSUR assessment – minor change (previously IB variation);

Changes to the due dates for the provision of the final study reports for 2 category 3 studies in the RMP – minor changes (previously 2 IB variations);

Update of the RMP with new data on the clinical trial exposure – minor change.

=> Single type II variation C.I.13 (previously 1 type II variation C.I.13 and 3 type IB variations C.I.11.z).

# Submission requirements

- Parallel RMP submissions: combined highlighted version acceptable at submission and during the procedure, but clean version (only accepted changes) will be requested at Opinion
- Submission requirements: RMP highlighted version (working document), Clinical Overview
- Updated RMP submission with closing sequence: not acceptable unless reviewed during the procedure
- Inclusion of progress reports/interim results from PhV plan studies: generally unnecessary
- Annex 1 (Product Information) of the RMP submission to Eudravigilance: within 30 days from CHMP Opinion or EC Decision (whichever is the latest outcome)
