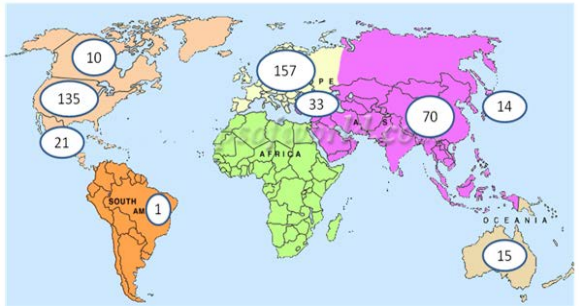
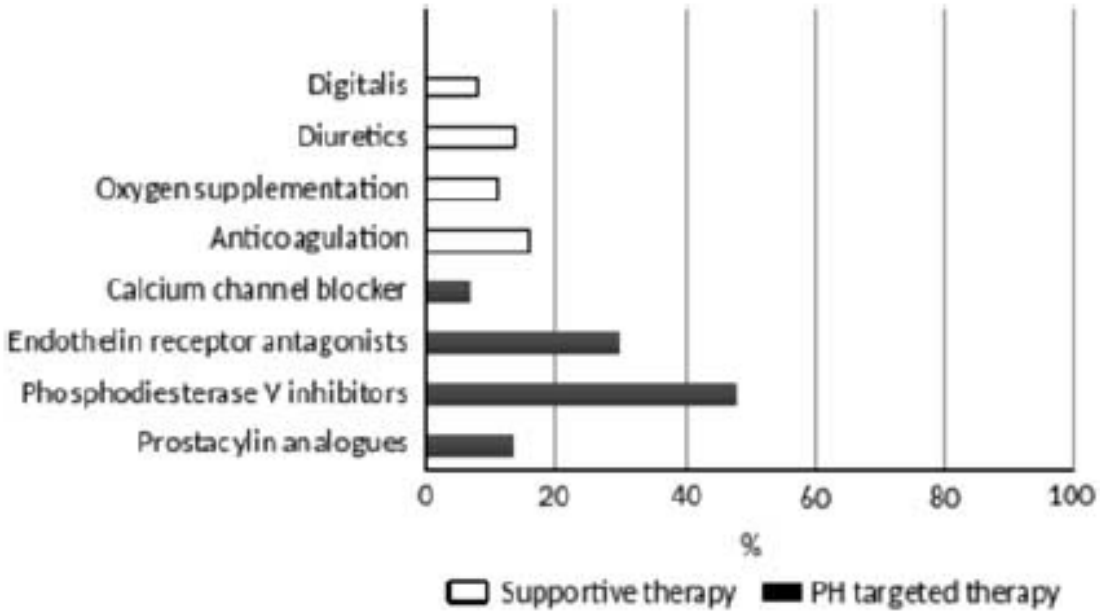
Current Treatment Practice
Global TOPP-1 registry

TOPP
Tracking Outcomes and Practice in Pediatric Pulmonary Hypertension



244 incident patients

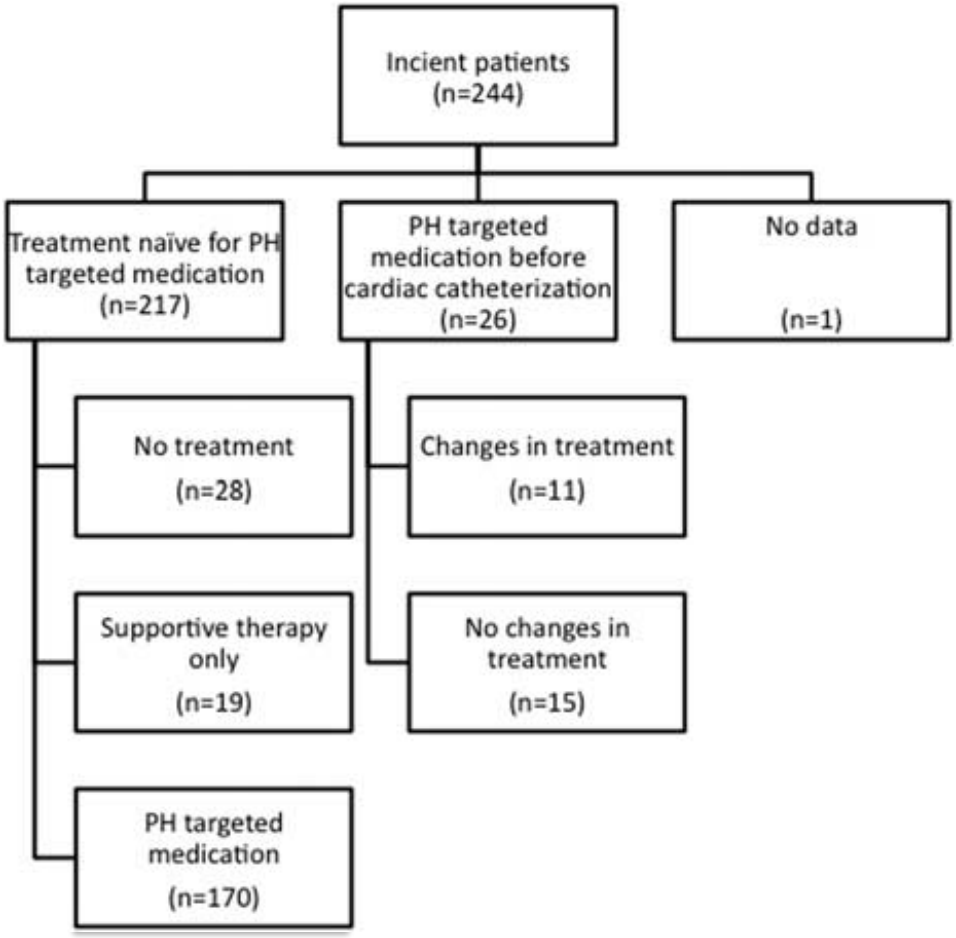
- Age at Dx 6yrs
  (3 months – 17 yrs)
- Female 58%
- Time Dx –Enr. < 3mo
- WHO-FC
  - I 30 (12%)
  - II 104 (42%)
  - III 89 (36%)
  - IV 21 (10%)



Humpl et al, Cardiol Young 2016

Current Treatment Practice: treatment initiation

Global TOPP-1 registry



- 80% of children were initiated on PAH-treatment
- **“standard of care”**
- placebo-controls pose ethical issues for study design
- legal issues for paediatric study designs

Current treatment practice
stratified by by age groups

TOPP
Tracking Outcomes and Practice in Pediatric Pulmonary Hypertension

Table 7. Targeted and supportive therapy by age.

	> 3 months to <2 years	2 to <6 years	6 to <12 years	12 to <18 years	P het*	P trend**
n	50	64	38	65		
PH-targeted therapy	31 (62.0%)	48 (75.0%)	28 (73.7%)	48 (73.8%)	0.43	0.18
Prostacyclin analogue	10 (20.0%)	9 (14.1%)	3 (7.9%)	8 (12.3%)	0.45	0.32
Endothelin receptor antagonist	8 (16.0%)	25 (39.1%)	14 (36.8%)	18 (27.7%)	0.04	0.30
PDE V inhibitor	23 (46.0%)	30 (46.9%)	18 (47.4%)	33 (50.8%)	0.96	0.60
CCB (high dose for PH)	1 (2.0%)	6 (9.4%)	1 (2.6%)	7 (10.8%)	0.18	0.17
Supportive therapy						
Anticoagulation	5 (10.0%)	6 (9.4%)	9 (23.7%)	14 (21.5%)	0.08	0.03
Oxygen	3 (6.0%)	5 (7.8%)	7 (18.4%)	8 (12.3%)	0.25	0.15
Diuretics	7 (14.0%)	12 (18.8%)	3 (7.9%)	8 (12.3%)	0.49	0.46
Digitalis	4 (8.0%)	5 (7.8%)	4 (10.5%)	5 (7.7%)	0.96	0.96

CCB = calcium channel blockers; PDE = phosphodiesterase; PH = pulmonary hypertension
*P-value from Fisher's exact test for heterogeneity
**P-value from χ^2 trend test

40
candidate
predictors

10 CANDIDATE PREDICTORS STUDIED IN ≥3 UNIQUE COHORTS:

- **Age**
- **Sex**
- **Etiology**
- **WHO functional class**
- **NT-proBNP**
- **Hemodynamics:**
  - Mean pulmonary artery pressure
  - Mean right atrial pressure
  - Cardiac index
  - Indexed pulmonary vascular resistance
  - Acute vasodilator response

Predictors of outcome in pediatric PAH

A systematic review and meta-analysis

- Six consistently reported predictors of outcome in pediatric PAH:
  - WHO functional class
  - NT-proBNP
  - Mean right atrial pressure
  - Cardiac Index
  - Pulmonary vascular resistance
  - Acute vasodilator response

ESC/ERS Guidelines adult PAH

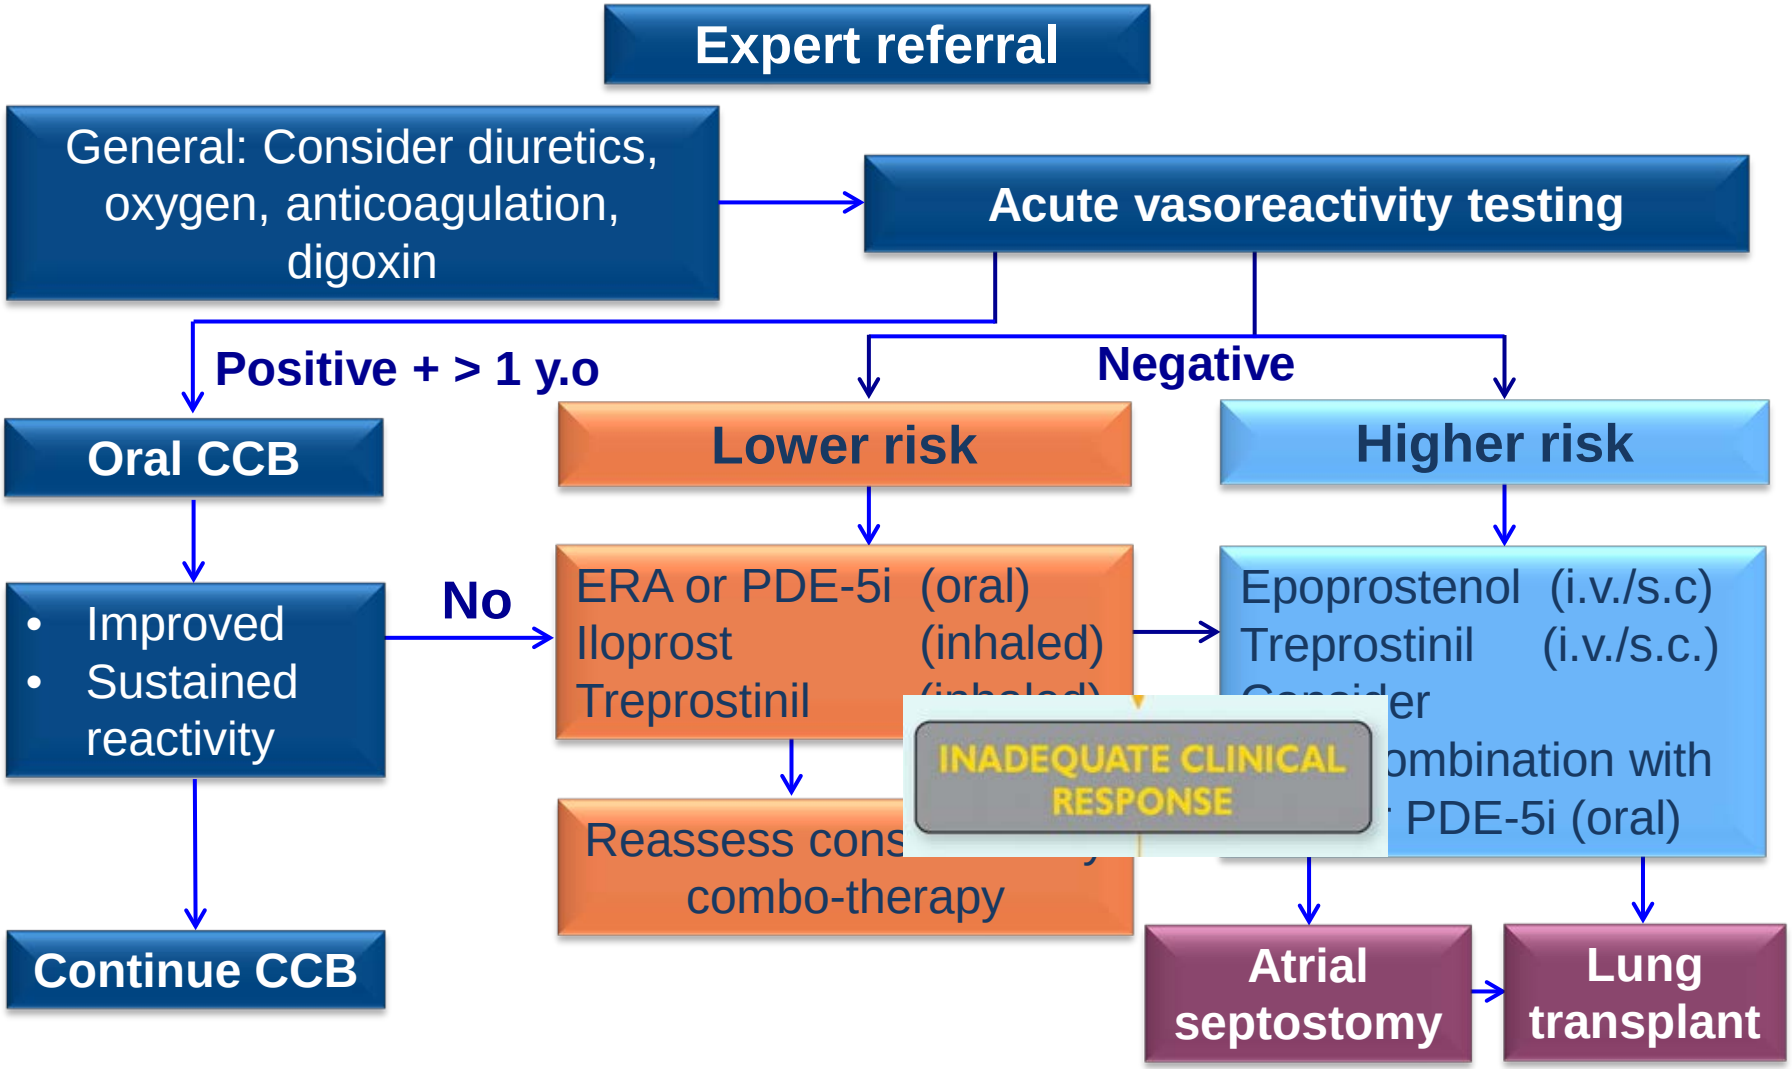
Determinants of prognosis[a] (estimated 1-year mortality)	Low risk <5%	Intermediate risk 5–10%	High risk >10%
Clinical signs of right heart failure	Absent	Absent	Present
Progression of symptoms	No	Slow	Rapid
Syncope	No	Occasional syncope[b]	Repeated syncope[c]
WHO functional class	I, II	III	IV
6MWD	>440 m	165–440 m	<165 m
Cardiopulmonary exercise testing	Peak VO_2 >15 ml/min/kg (>65% pred.) VE/VCO_2 slope <36	Peak VO_2 11–15 ml/min/kg (35–65% pred.) VE/VCO_2 slope 36–44.9	Peak VO_2 <11 ml/min/kg (<35% pred.) VE/VCO_2 slope ≥45
NT-proBNP plasma levels	BNP <50 ng/l NT-proBNP <300 ng/l	BNP 50–300 ng/l NT-proBNP 300–1400 ng/l	BNP >300 ng/l NT-proBNP >1400 ng/l
Imaging (echocardiography, CMR imaging)	RA area <18 cm^2 No pericardial effusion	RA area 18–26 cm^2 No or minimal, pericardial effusion	RA area >26 cm^2 Pericardial effusion
Haemodynamics	RAP <8 mmHg CI ≥2.5 l/min/m^2 SvO_2 >65%	RAP 8–14 mmHg CI 2.0–2.4 l/min/m^2 SvO_2 60–65%	RAP >14 mmHg CI <2.0 l/min/m^2 SvO_2 <60%

Galie et al Eur Heart J 2015

- This study:
  - Does not preclude the potential of other variables
  - Provides direction for further research

Ploegstra MJ et al Int J Cardiol 2015

Consensus paediatric IPAH/HPAH treatment algorithm*
5th WSPH (Nice 2013):



- Use of all agents is considered off label in children aside from sildenafil in Europe

Ivy D, *et al. J Am Coll Cardiol* 2013

Treatment Goals

Clinically meaningful:

- Clinical event relevant to the patient
  - Death, Tx, Hospitalisation for PAH
- Measures directly how a patient feels, functions or survives
  - Symptoms, Functional class, excercise testing, 6MWD, (ADL-)activities?

    (provided no negative impact mortality/morbidity)

Surrogate:

- Used as a substitute for a clinically meaningful endpoint
- Changes induced by a therapy on such variable are expected to reflect changes in a clinically meaningful endpoint

Flemming and Powers. Stat in Med 2012

Pediatric PAH Treatment Goals

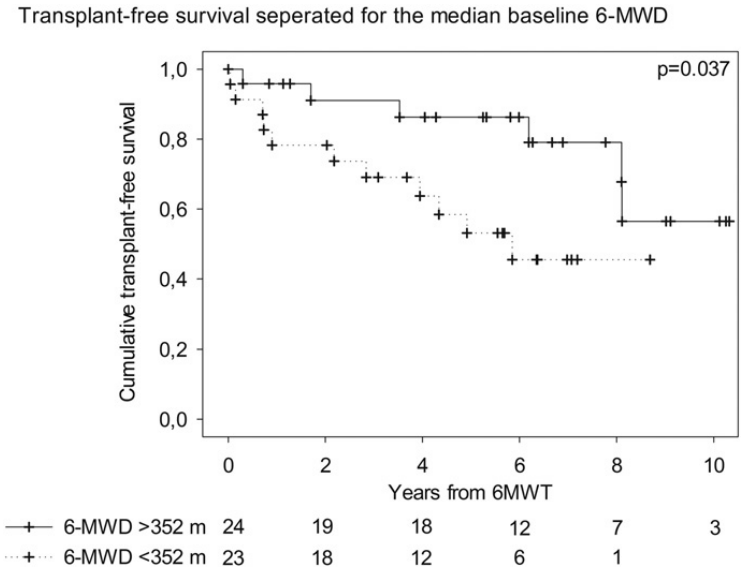
WSPH Pediatric Task Force, 2013

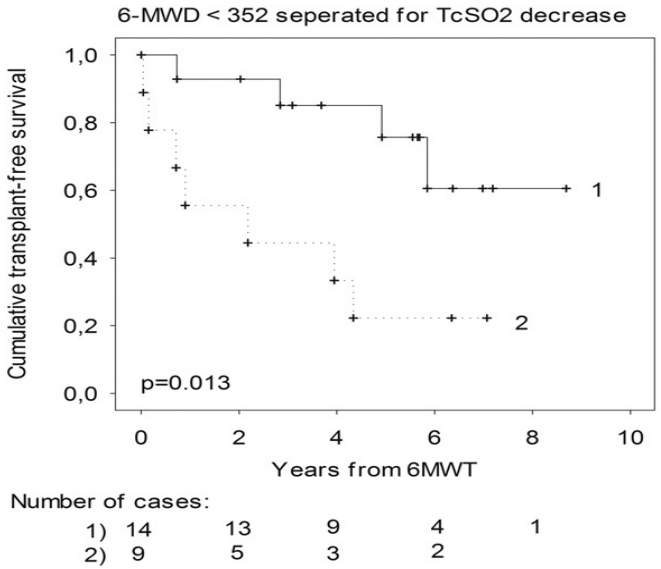
LOWER RISK	DETERMINANTS OF RISK	HIGHER RISK
No	Clinical evidence of RV failure	Yes
No	Progression of symptoms	Yes
No	Syncope	Yes
	Growth	Failure to thrive
I,II	WHO functional class	III,IV
Minimally elevated	BNP / NTproBNP	Significantly elevated, rising
syst CI > 3.0 L/min/m^2 mPAP/mSAP < 0.75 Acute Vasoreactivity	Hemodynamics	syst CI < 2.5 L/min/m^2 mPAP/mSAP > 0.75, rising RAP > 10mmHg PVRI > 20 WU*m^2
	Echocardiography	Severe RV dysfunction, PE
> 450 m, stable (> z-2 ; % predicted)	6MWD (if ≥ 8 yr and developmentally able)	≤ 350m decreasing

Level of evidence C

Ivy et al J Am Coll Cardiol 2013

6MWT in Paediatric PAH





The 6-MWD is feasible in children > 7yrs with PAH

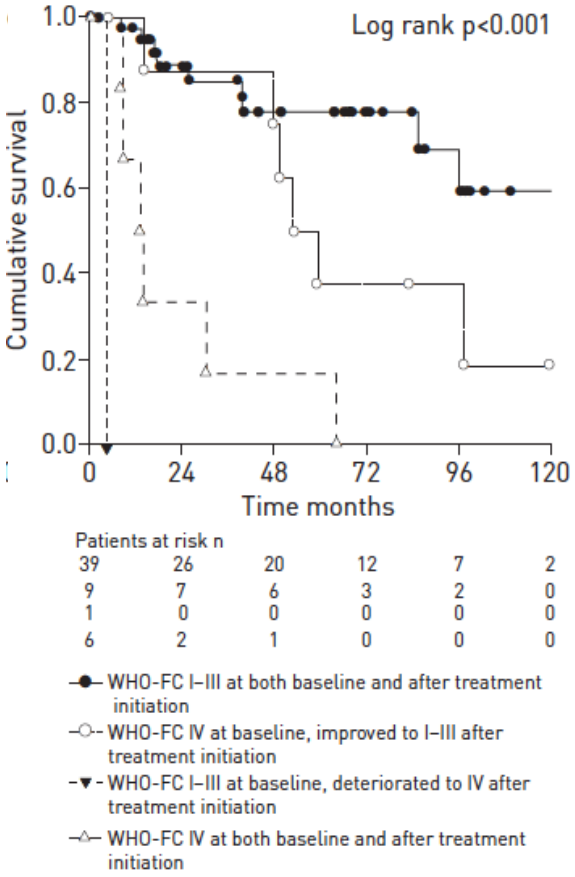
Both absolute values and z-scores:

- represents directly “how a child feels, functions”
- correlates with WHO-FC and NTproBNP and CPET
- +/- Predicts transplant free survival

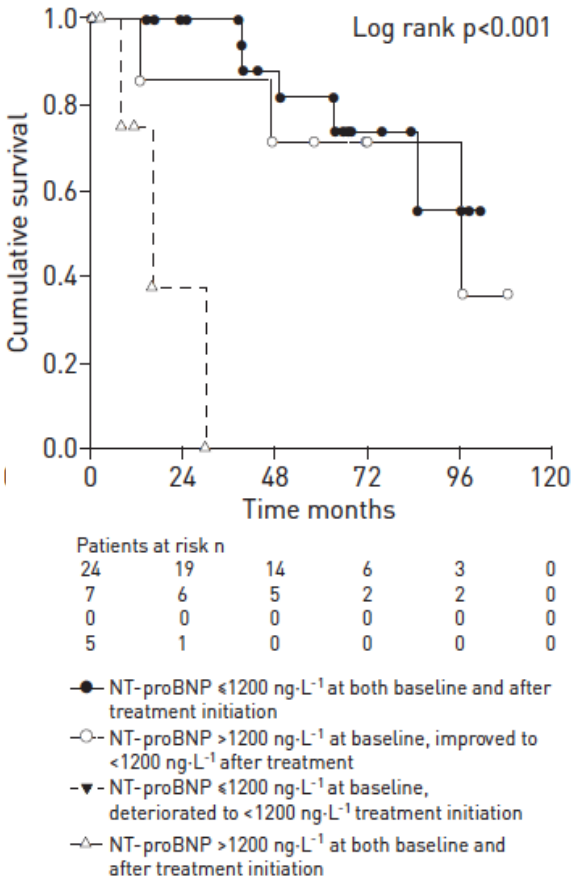
Douwes JM, et al. Heart 2014
Zuk et al; Ped Cardiol 2017
Lammers et al; Arch Dis Child 2011

Treatment Goals in Pediatric PAH

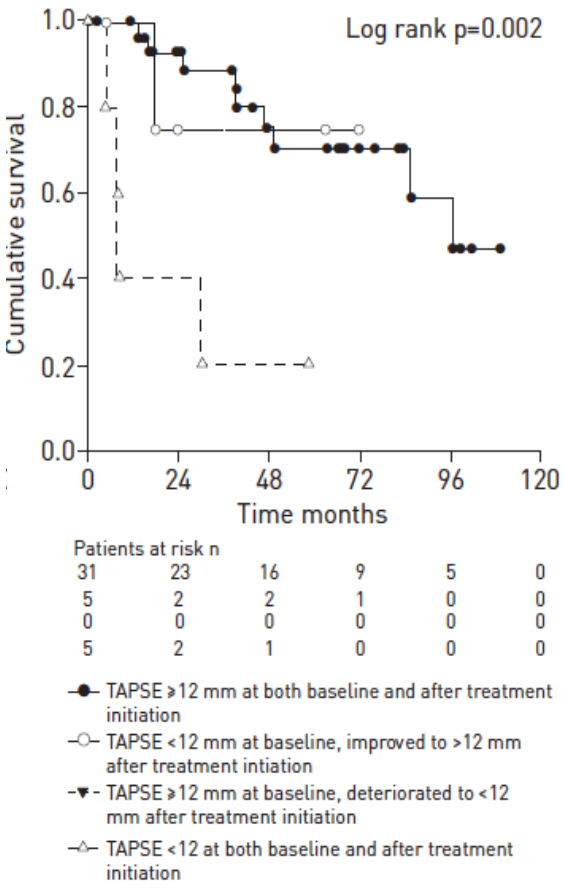
WHO-FC



NT-pro-BNP



TAPSE



Ploegstra MJ et al. Eur Resp J 2015

Pediatric PAH
Clinical Endpoints

- Adult trials are currently shifting towards long-term trials with an event-driven design
  - Feasibility in children to have a 3-5 year trial?

- We are still searching for an endpoint for the paediatric population that is acceptable, reproducible, without risks and feasible with a reasonable number of patients!

Time to clinical worsening in paediatric PAH

5th WSPH (Nice 2013):

- Death
- Transplantation
- Hospitalisation for PAH, unplanned
  - Includes instalment of i.v. epoprostenol therapy
- Deterioration of PAH
  - Increased functional class

  and

  - Signs/symptoms of RHF

  and/or

  - Decreased exercise capacity (6MWD, CPET) (if applicable)

Ivy D, *et al. J Am Coll Cardiol* 2013

Endpoint event rates

Total group (n=70)

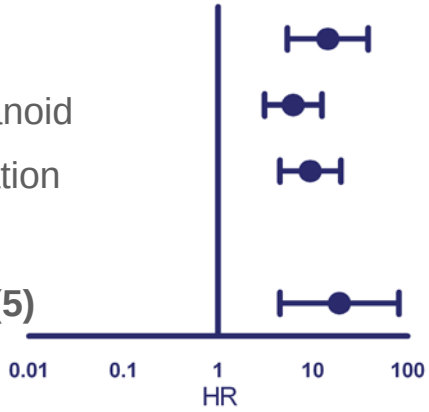
	Patients n (%)	Event rate n/100 py
(1) Death	28 (40%)	10.1
(2) Lung-transplantation	7 (10%)	2.5
(3) Hospitalization	38 (54%)	21.4
(4) Initiation of IV prostanoids	26 (37%)	9.4
(5) Functional deterioration	50 (71%)	48.1
Combination of (1)(2)(3)(4)(5)	59 (84%)	**91.5**

Stratified by diagnostic groups

	Event rate n/100 py
Idiopathic PAH (n=37)	102.1
Associated PAH – CHD (n=25)	63.5
Associated PAH – Other (n=8)	264.4

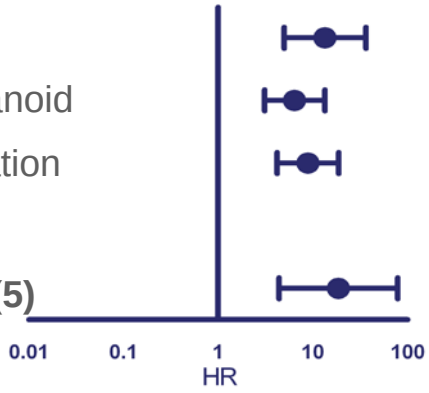
Association of *soft* endpoint components with *hard* endpoints

Time-dependent Cox regression analysis



(3) Hospitalization	9.4 (4.5-19.8)	P<0.001
(4) Initation of IV prostanoid	6.2 (3.1-12.5)	P<0.001
(5) Functional deterioration	14.4 (5.4-38.6)	P<0.001
Combination of (3)(4)(5)	**19.1 (4.5-81.2)**	**P<0.001**

Adjusted for diagnosis



(3) Hospitalization	8.9 (4.2-18.8)	P=0.003
(4) Initation of IV prostanoid	6.4 (3.1-13.4)	P=0.008
(5) Functional deterioration	13.4 (5.0-36.3)	P=0.005
Combination of (3)(4)(5)	**18.6 (4.4-79.1)**	**P=0.014**

Challenges in Pediatric PAH

- **Agree on Treatment Goals and Clinical Endpoints**
- **Agree on Study Population**
  - Definition IiPAH/HPAH +/- PAH-CHD)
  - Rarity / Heterogeneity?
- **Study designs**
  - RCT? (Standard of care (80%)
  - Alternative designs
    - SMART
    - Adaptive / Bayesian
    - Valuable information from: cohort studies, registries, historical controls and meta-analyses
