

Ph 2a trial design is being
planned

How does PK variation observed
in Ph I affect trial design

In vitro ADME phenotype

Majority

- Only Collect DNA samples

Minority

- Do no PGX

Scenario 2

Results from 5 Ph I studies

Split

- Only Collect DNA samples
- Do PGX (target>chip)

Scenario 3

Genotype 2 phase I studies

Majority

- Collect DNA samples and genotype for specific enzymes

Minority

- Collect samples or no PG

Scenario 4

Company genotyped all Ph I

Majority

- Collect samples

Minority

- Collect and genotype or no PG
