

From your stakeholder group perspective, how can ACT EU best support multi-national academic clinical trials?

- Need for robust funding mechanisms for academic multinational studies
- Need to strengthen & further develop existing infrastructures supporting clinical studies management (EU & national)
- Need to attract trained and experienced staff >> training, career development & funding
- Need to harmonise site agreements across EU >> mandatory templates (eligibility criteria for public fundings)
- Need to support management of study treatment >> public facilities for manufacturing / labelling / dispensing
- Need to harmonise national legislations for studies without health products and observational studies
