www.animalhealth europe.eu

AnimalhealthEurope priorities for DoA*

1. UPD & SPOR for AH should be based on:
 - Veterinary business cases (2016 CGVPS output)
 - Minimal requirements to achieve goals (for both data fields and standardisation) - Standardisation as such is not a use case
2. Variations Not Requiring Scientific Assessment:
implementation independent of whether structured or non-structured data is affected
3. A process should be designed to solve potential data quality issues (for e.g. P data)
4. Importance of a bulk change possibility for 2 & 3
5. Systems must allow confidential handling of specific data fields until approval
6. New DBs must be accessible/usable by all NCAs
7. Longer term: single data entry principle (in e.g. CESP Data Set Module) enabled by key interfaces (e.g. CESP <-> UPD/PMS) allowing data re-use & minimizing workload

*DoA: date of application of NVR - 28.01.2022

A warm, golden-toned photograph of a person's hands gently cradling a white dog's face. The dog's eyes are closed, and its nose is visible. The background is softly blurred.

Thank you!
