Tools to collect patient-generated data

Tanja Stamm

_institute for Outcomes Research, Center for Medical Statistics, Informatics and Intelligent Systems, Medical University of Vienna & Ludwig Boltzmann Institute for Arthritis and Rehabilitation_
The key objectives

• Create multi-stakeholder consensus on PROs and core outcome sets that can be measured in clinical practice across several countries;

• Equip patients with practical tools to measure their outcomes in a standardized manner and improve clinical care both at a patient and population level;

• Create an ethical framework around data governance to establish trust and enable data analysis to advance health science and policy.

This project has received funding from the Innovative Medicines Initiative 2 Joint Undertaking under grant agreement Nº 945345-2. This Joint Undertaking receives support from the European Union’s Horizon 2020 research and innovation programme and EFPIA and Trial Nation and JDRF.
