[1] Notifications are issued for type I variations and Article 61(3) notifications (unless part of a group including a type II variation or extension application or a worksharing application). Opinions are issued for all other procedures.
[2] A Commission decision (CD) is issued for procedures that affect the terms of the marketing authorisation (e.g. summary of product characteristics, annex II, labelling, package leaflet). The CD is issued within two months of the opinion for variations falling under the scope of Article 23.1a(a) of Regulation (EU) No. 712/2012, or within one year for other procedures.

II/0043	Update of sections 4.2 and 5.2 of the SmPC in order to update dosing recommendations and pharmacokinetic information for patients with renal impairment based on the totality of data from clinical studies; the Package Leaflet is updated accordingly. C.I.4 - Change(s) in the SPC, Labelling or PL due to new quality, preclinical, clinical or pharmacovigilance data	26/10/2017	08/12/2017	SmPC and PL	No dose adjustment is necessary in patients with mild renal impairment. Esbriet should be used with caution in patients with moderate (CrCl 30-50 ml/min) renal impairment. Esbriet therapy should not be used in patients with severe renal impairment (CrCl <30 ml/min) or end stage renal disease requiring dialysis. The use of pirfenidone is contraindicated in patients with severe renal impairment (CrCl <30ml/min) or end stage renal disease requiring dialysis. Approximately 70–80% of pirfenidone is metabolised via CYP1A2 with minor contributions from other CYP isoenzymes including CYP2C9, 2C19, 2D6, and 2E1. In vitro data indicate some pharmacologically relevant activity of the major metabolite (5 carboxy-pirfenidone) at concentrations in excess of peak plasma concentrations in IPF patients. This may become clinically relevant in patients with moderate renal impairment where plasma exposure to 5 carboxy-pirfenidone is increased. The mean exposure to 5 carboxy-pirfenidone was significantly higher in the moderate and severe renal impairment groups than in the group with normal renal function.

The efficacy data provided from study PIPF-016 (Phase 3 randomized, double-blind, placebo-controlled), as well as the new pooling of the 52 week efficacy data have further demonstrated the efficacy of pirfenidone in IPF, especially with regards rate of FVC decline, 6MWT performance and mortality data. In addition, the safety

					update from the ongoing open label studies (PIPF-002 and 012) as well as the safety data from PIPF-016 have allowed the company to further refine the adverse event profile over long term use.

Esbriet should be used with caution in patients treated with moderate or strong and selective inhibitors of CYP1A2. If concomitant use of Esbriet with a strong and selective inhibitor of CYP1A2 cannot be avoided the dose of Esbriet should be reduced and patients should be closely monitored for emergence of adverse reactions associated with Esbriet therapy.
