¹ Notifications are issued for type I variations and Article 61(3) notifications (unless part of a group including a type II variation or extension application or a worksharing application). Opinions are issued for all other procedures.

² A Commission decision (CD) is issued for procedures that affect the terms of the marketing authorisation (e.g. summary of product characteristics, annex II, labelling, package leaflet). The CD is issued within two months of the opinion for variations falling under the scope of Article 23.1a(a) of Regulation (EU) No. 712/2012, or within one year for other procedures.

³ SmPC (Summary of Product Characteristics), Annex II, Labelling, PL (Package Leaflet).

R/0022	Renewal of the marketing authorisation.	20/02/2014	23/04/2014	SmPC, Annex II, Labelling and PL	Reviewing the efficacy and safety data available for Instanyl since the granting of the marketing authorisation revealed no new major safety concerns. From the clinical perspective, the CHMP considered that the overall benefit-risk balance of Instanyl remained unchanged and was positive. However, an additional five-year year renewal was required based on pharmacological grounds mainly driven by the high level of off label use, for which the safety

					profile remains uncertain.
PSUSA/1369/ 201304	Periodic Safety Update EU Single assessment - fentanyl (transmucosal route of administration)	19/12/2013	28/02/2014	SmPC and PL	Refer to the Scientific conclusions and grounds recommending the variation to the terms of the marketing authorisation for PSUSA/1369.

II/0019	Submission of the final clinical trial report for the trial FT-1301-032-SP (Nose-400). In this study the nasal tolerability of all dose strengths of Instanyl was investigated. C.I.13 - Other variations not specifically covered elsewhere in this Annex which involve the submission of studies to the competent authority	21/11/2013	n/a		The results of the nasal tolerability study do not impact the benefit/risk balance of Instanyl for the treatment of breakthrough pain in cancer patient. According to the results from the nasal tolerability study, a very few number of patients were reported with mucosa signs or abnormalities worsening. However, due especially to the low number of patients included in that study, a risk of local effect and nasal perforation with the product could not be excluded. Therefore nasal tolerability remains of concern and the MAH should continue to monitor cases of nasal effects and should seek to identify risk factors associated to nasal effects and the delay to onset of these effects.
