

ANNEX I
SUMMARY OF PRODUCT CHARACTERISTICS

1. NAME OF THE VETERINARY MEDICINAL PRODUCT

Tessie 0.3 mg/ml oral solution for dogs

2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each ml contains:

Active substance:

Tasipimidine 0.3 mg
(equivalent to 0.427 mg tasipimidine sulfate)

Excipients:

Sodium benzoate (E211) 0.5 mg
Tartrazine (E102)
Brilliant blue (E133)

For the full list of excipients, see section 6.1.

3. PHARMACEUTICAL FORM

Oral solution.
Clear green solution.

4. CLINICAL PARTICULARS

4.1 Target species

Dogs

4.2 Indications for use, specifying the target species

Short term alleviation of situational anxiety and fear in dogs triggered by noise or owner departure.

4.3 Contraindications

Do not use in cases of hypersensitivity to the active substance or to any of the excipients.
Do not use in dogs with moderate or severe systemic disease (graded as ASA III or greater), e.g. moderate to severe renal, liver or cardiovascular disease.
Do not use in dogs obviously sedated (shows signs of e.g. drowsiness, uncoordinated movements, decreased responsiveness) from previous dosing.
See section 4.7.

4.4 Special warnings for each target species

Typical signs of anxiety and fear are panting, trembling, pacing (frequent change of place, running around, restlessness), seeking people (clinging, hiding behind, pawing, following), hiding (under furniture, in dark rooms), trying to escape, freezing (absence of movements), refusing to eat food or treats, inappropriate urination, inappropriate defecation, salivation, etc. These signs may be alleviated but may not be completely eliminated.

In extremely nervous, excited or agitated animals, the levels of endogenous catecholamines are often high. The pharmacological effect induced by alpha-2 agonists in such animals may be reduced.

Consideration should be given to use of a behavioural modification programme, especially when dealing with a chronic condition such as separation anxiety.

4.5 Special precautions for use

Special precautions for use in animals

See also section 4.9.

If the dog is sedated (shows signs of e.g. drowsiness, uncoordinated movements, decreased responsiveness), do not leave the dog alone and withhold food and water.

The safety of administering tasipimidine to dogs younger than 6 months and older than 14 years of age or weighing less than 3 kg has not been studied. Use only according to a benefit-risk assessment by the responsible veterinarian.

The accuracy of the syringe is demonstrated only for doses of 0.2 ml and higher. Dogs requiring doses lower than 0.2 ml can therefore not be treated.

As a decrease of body temperature can occur after the administration, the treated animal should be kept at a suitable ambient temperature.

Tasipimidine may indirectly induce an increase of glycaemia. In diabetic animals, use according to a benefit-risk assessment by the veterinarian.

In case of vomiting after intake of the oral solution, maintain the usual recommended interval between two administrations (at least 3 hours) before administering the product again.

Special precautions to be taken by the person administering the veterinary medicinal product to animals

Exposure to tasipimidine may cause adverse effects such as sedation, respiratory depression, bradycardia and hypotension.

Avoid oral ingestion and skin contact including hand-to-mouth contact.

In order to prevent children from getting access to the product, don't leave the filled dosing syringe unattended while preparing the dog for administration. The used syringe and the closed bottle should be returned to the original carton and stored out of the sight and reach of children.

In case of skin contact, wash the exposed skin immediately with water and remove contaminated clothes. In case of accidental ingestion, seek medical advice immediately and show the package leaflet or the label to the physician. Do not drive, as sedation and changes in blood pressure may occur.

This product may cause slight eye irritation. Avoid eye contact including hand-to-eye contact. In case of eye contact, rinse the eyes immediately with water.

This veterinary medicinal product may cause hypersensitivity (allergy). People with known hypersensitivity to tasipimidine or any of the excipients should avoid contact with the veterinary medicinal product.

Wash hands after use.

4.6 Adverse reactions (frequency and seriousness)

Lethargy and emesis were very common adverse reactions in clinical trials.

Sedation, behavioural disorders (barking, avoidance, disorientation, increased reactivity), pale mucous membranes, ataxia, diarrhoea, urinary incontinence, nausea, gastroenteritis, polydipsia, leucopenia, hypersensitivity reactions, somnolence and anorexia were common adverse reactions in clinical trials.

Additionally, decrease in heart rate, blood pressure and body temperature were observed in preclinical studies in non-anxious animals.

The frequency of adverse reactions is defined using the following convention:

- very common (more than 1 in 10 animals treated displaying adverse reactions)
- common (more than 1 but less than 10 animals in 100 animals treated)
- uncommon (more than 1 but less than 10 animals in 1,000 animals treated)
- rare (more than 1 but less than 10 animals in 10,000 animals treated)
- very rare (less than 1 animal in 10,000 animals treated, including isolated reports).

4.7 Use during pregnancy, lactation or lay

Laboratory studies in rats have shown evidence of developmental toxicity at maternotoxic doses causing clear sedation-related clinical signs, decreased food consumption, and decreased body weight gain of the dam.

The safety of the veterinary medicinal product has not been established during pregnancy and lactation in the target species.

Do not use during pregnancy and lactation.

4.8 Interaction with other medicinal products and other forms of interaction

The use of other central nervous system depressants is expected to potentiate the effects of tasipimidine and therefore an appropriate dose adjustment should be made.

4.9 Amounts to be administered and administration route

Oral use.

The product is intended for short term use but it can be safely administered for up to 9 consecutive days.

The product should be administered orally at a dose of 0.1 ml/kg bodyweight (equivalent to 30 µg/kg) in situational anxiety and fear in dogs triggered by noise or owner departure.

If the product is intended for use in situations where the dog is meant to be alone following the administration, a test dose should be given. Following administration of the test dose the dog should be observed for 2 hours to make sure the selected dose of the product is not associated with adverse reactions and that it is safe for the treated dog to be left alone (see section 4.5).

Do not feed the dog for one hour before to one hour after treatment as absorption may be delayed. A small treat can be given to ensure that the dog swallows the solution. Water can be freely available.

Observe the dog. If the fear triggering event continues and the dog starts to show signs of anxiety and fear again, re-dosing can be done when at least 3 hours has passed from the previous dose. The product can be dosed up to 3 times within every 24 hours.

Dose reduction

If the dog appears drowsy, its movements are uncoordinated or it responds to its owner's call abnormally slowly after receiving treatment, the dose could be too high. The subsequent dose should

be reduced to 2/3 of the volume of the previous dose, corresponding to 20 µg/kg bodyweight. Dose reduction should be implemented following veterinary advice only.

Anxiety and fear triggered by noise:

The first dose should be given one hour before expected start of an anxiety triggering stimulus, as soon as the dog shows the first signs of anxiety, or when the owner detects a typical stimulus for eliciting anxiety or fear in the respective dog.

Anxiety and fear triggered by owner departure:

The dose should be given one hour before expected owner departure.

Instructions for administration:

1. REMOVE CAP

Remove the cap from the bottle (press down and twist). Save the cap for reclosure.

2. CONNECT SYRINGE

Push the syringe tightly into the adapter located at the top of the bottle. Use only the syringe provided with the product.

3. SELECT DOSE

Turn the bottle with the syringe in place upside down. Pull the plunger out until the black line of correct dose (ml) can be seen under the grip plate of the syringe barrel.

If the dog weighs more than 30 kg, the total dose will be given in two separate doses as the syringe holds maximally 3.0 ml of solution.

The accuracy of the syringe is demonstrated only for doses of 0.2 ml and higher. Dogs requiring doses lower than 0.2 ml can therefore not be treated.

Don't leave the filled dosing syringe unattended while preparing the dog for administration.

4. GIVE DOSE

Gently place the syringe in the mouth of the dog and administer the dose to the base of the tongue by gradually pressing the plunger until the syringe is empty. Give the dog a small treat to ensure that the dog swallows the solution.

5. BACK TO PACKAGE

Replace the cap and rinse the syringe with water when finished. Put the syringe and bottle back to the secondary package and put them in the refrigerator.

4.10 Overdose (symptoms, emergency procedures, antidotes)

The level and duration of sedation is dose dependent, and signs of sedation may therefore particularly occur in case the dose is exceeded. Dogs receiving a high overdose of the product have a higher risk of aspirating vomit due to the emetic and CNS depressant effects associated with the active substance. A very high overdose can potentially be life-threatening.

Reduced heart rate may be seen after administration of higher than recommended doses of tasipimidine oral solution. Blood pressure decreases slightly below normal levels. Respiration rate can occasionally decrease. Higher than recommended doses of tasipimidine oral solution may also induce a number of other alpha-2 adrenoceptor mediated effects, which include increase in blood pressure, decrease in body temperature, lethargy, vomiting and a QT prolongation.

As demonstrated in a preclinical study, the effects of tasipimidine can be reversed using a specific antidote, atipamezole (alpha-2 adrenoceptor antagonist). One hour after treatment with tasipimidine at 60 µg/kg body weight, an atipamezole dose of 300 µg/kg bodyweight, corresponding to 0.06 ml/kg bodyweight of solution containing 5 mg/ml, was administered i.v. Results of this study demonstrated that the effects of tasipimidine could be reversed. However, as the half-life of tasipimidine exceeds that of atipamezole, some signs of tasipimidine effects may reappear.

4.11 Withdrawal period

Not applicable.

5. PHARMACOLOGICAL PROPERTIES

Pharmacotherapeutic group: other hypnotics and sedatives
ATCvet code: QN05CM96

5.1 Pharmacodynamic properties

The veterinary medicinal product contains tasipimidine as the active substance. Tasipimidine is a potent and selective alpha-2A adrenoceptor agonist (as demonstrated in human adrenoceptors) that inhibits the release of noradrenaline from noradrenergic neurons, blocks the startle reflex and thus counteracts arousal.

Tasipimidine as an alpha-2 adrenoceptor agonist reduces the over activation of noradrenergic neurotransmission (increased release of noradrenaline in the *locus coeruleus*), which is shown to induce anxiety and fear in experimental animals exposed to stressful situations.

In summary, tasipimidine exerts its effects by decreasing central noradrenergic neurotransmission. In addition to the anxiolytic effect, tasipimidine can cause other known dose dependent alpha-2 adrenoceptor-mediated pharmacological effects such as sedation, analgesia and lowering of heart rate, blood pressure and rectal temperature.

The onset of effect is usually seen within 1 hour after treatment administration. The duration of effect shows some individual variation, and it can last for up to 3 hours or longer.

5.2 Pharmacokinetic particulars

Absorption

After oral administration in solution, tasipimidine is rapidly absorbed in fasted dogs. In a pharmacokinetic study in fasted dogs, a moderate oral bioavailability of tasipimidine was observed being on average 60%. After oral administration of 30 µg/kg to dogs in fasted state, the maximum plasma concentration of tasipimidine is approximately 5 ng/ml and occurs at 0.5–1.5 hours. When the dosing is repeated 3 hours later, the following maximum plasma concentration is shown to be moderately (30%) higher but there is no effect on the time of maximum concentration. Feeding at the time of dosing slows down the absorption and decreases the maximum plasma levels. In fed state the peak concentration is lower being 2.6 ng/ml and comes later at 0.7–6 hours. The total plasma exposure to tasipimidine is comparable in fasted and fed states. Systemic exposure increases approximately in a dose proportional manner within the dose range of 10–100 µg/kg. No signs of accumulation are seen after repeated administration.

Distribution

Tasipimidine is a highly distributed compound, the volume of distribution in dogs is 3 l/kg. Tasipimidine penetrates the brain tissue in dogs and the drug concentration after repeated administration is higher in brain than in plasma. The *in vitro* binding of tasipimidine to dog plasma proteins is low, approximately 17%.

Metabolism

The metabolism of tasipimidine occurs mainly through demethylation and dehydrogenation and the most abundant circulating metabolites are demethylation and dehydrogenation products. The demethylated dehydrogenation product of tasipimidine is found in trace levels in dog plasma after high doses. The circulating metabolites are much less potent than the parent drug, as demonstrated in human and rat adrenoceptors.

Excretion

Tasipimidine is a highly cleared compound being rapidly eliminated from the circulation of dogs. The total clearance is 21 ml/min/kg after 10 µg/kg i.v. bolus dose. The mean terminal half-life is 1.7 hours after oral administration in fasted state. The portion of tasipimidine excreted unchanged in urine is 25%. All the circulating metabolites are excreted in urine much less compared to tasipimidine.

6. PHARMACEUTICAL PARTICULARS

6.1 List of excipients

Sodium benzoate (E211)
Sodium citrate
Citric acid monohydrate
Brilliant blue (E133)

Tartrazine (E102)
Purified water

6.2 Major incompatibilities

In the absence of compatibility studies, this veterinary medicinal product must not be mixed with other veterinary medicinal products.

6.3 Shelf life

Shelf life of the veterinary medicinal product as packaged for sale: 3 years.
Shelf life after first opening the immediate packaging: 12 months in a refrigerator (2°C to 8°C) or 1 month below 25°C.

6.4 Special precautions for storage

Store in a refrigerator (2°C to 8°C). Keep the bottle in the outer carton in order to protect from light.

6.5 Nature and composition of immediate packaging

15 ml clear glass type III bottle with a polypropylene child-resistant closure and a low-density polyethylene adapter and a high-density polyethylene liner. An oral low-density polyethylene/polystyrene syringe is included in the pack.

Pack sizes:
Cardboard box with 1 bottle and an oral syringe.

6.6 Special precautions for the disposal of unused veterinary medicinal product or waste materials derived from the use of such products

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal product should be disposed of in accordance with local requirements.

7. MARKETING AUTHORISATION HOLDER

Orion Corporation
Orionintie 1
FI-02200 Espoo
Finland

8. MARKETING AUTHORISATION NUMBER(S)

EU/2/21/276/001

9. DATE OF FIRST AUTHORISATION/RENEWAL OF THE AUTHORISATION

Date of first authorisation: 16/08/2021

10. DATE OF REVISION OF THE TEXT

Detailed information on this veterinary medicinal product is available on the website of the European Medicines Agency (<http://www.ema.europa.eu/>).

PROHIBITION OF SALE, SUPPLY AND/OR USE

Not applicable.

ANNEX II

- A. MANUFACTURER RESPONSIBLE FOR BATCH RELEASE**
- B. CONDITIONS OR RESTRICTIONS REGARDING SUPPLY AND USE**
- C. STATEMENT OF THE MRLs**

A. MANUFACTURER RESPONSIBLE FOR BATCH RELEASE

Name and address of the manufacturers responsible for batch release

Orion Corporation Orion Pharma
Tengströminkatu 8

Not applicable.

ANNEX III
LABELLING AND PACKAGE LEAFLET

A. LABELLING

PARTICULARS TO APPEAR ON THE OUTER PACKAGE

CARTON

1. NAME OF THE VETERINARY MEDICINAL PRODUCT

Tessie 0.3 mg/ml oral solution for dogs
tasipimidine

2. STATEMENT OF ACTIVE SUBSTANCES

1 ml contains: 0.3 mg tasipimidine.

3. PHARMACEUTICAL FORM

Oral solution

4. PACKAGE SIZE

15 ml bottle
Oral syringe

5. TARGET SPECIES

Dogs

6. INDICATION(S)

7. METHOD AND ROUTE(S) OF ADMINISTRATION

Oral use.
Read the package leaflet before use.

8. WITHDRAWAL PERIOD(S)

9. SPECIAL WARNING(S), IF NECESSARY

Read the package leaflet before use.

This product may be harmful after ingestion or skin contact or cause hypersensitivity reactions. Avoid oral ingestion and skin contact including hand-to-mouth contact.

10. EXPIRY DATE

EXP:

Once opened use within 12 months.

11. SPECIAL STORAGE CONDITIONS

Store in a refrigerator. Keep the bottle in the outer carton in order to protect from light.
Read the package leaflet for more information.

12. SPECIAL PRECAUTIONS FOR THE DISPOSAL OF UNUSED PRODUCTS OR WASTE MATERIALS, IF ANY

Disposal: read package leaflet.

13. THE WORDS “FOR ANIMAL TREATMENT ONLY” AND CONDITIONS OR RESTRICTIONS REGARDING SUPPLY AND USE, IF APPLICABLE

For animal treatment only. To be supplied only on veterinary prescription.

14. THE WORDS “KEEP OUT OF THE SIGHT AND REACH OF CHILDREN”

Keep out of the sight and reach of children.

B. PACKAGE LEAFLET

PACKAGE LEAFLET
Tessie 0.3 mg/ml oral solution for dogs

1. NAME AND ADDRESS OF THE MARKETING AUTHORISATION HOLDER AND OF THE MANUFACTURING AUTHORISATION HOLDER RESPONSIBLE FOR BATCH RELEASE, IF DIFFERENT

Marketing authorisation holder:

Orion Corporation
Orionintie 1
FI-02200 Espoo
Finland

Manufacturers responsible for batch release:

Orion Corporation Orion Pharma
Tengströminkatu 8
FI-20360 Turku
Finland

Orion Corporation Orion Pharma
Joensuunkatu 7
FI-24100 Salo
Finland

2. NAME OF THE VETERINARY MEDICINAL PRODUCT

Tessie 0.3 mg/ml oral solution for dogs
tasipimidine

3. STATEMENT OF THE ACTIVE SUBSTANCE(S) AND OTHER INGREDIENT(S)

Each ml contains:

Active substance:

Tasipimidine 0.3 mg
(equivalent to 0.427 mg tasipimidine sulfate)

Excipients:

Sodium benzoate (E211) 0.5 mg
Tartrazine (E102)
Brilliant blue (E133)

Clear green solution.

4. INDICATION(S)

Short term alleviation of situational anxiety and fear in dogs triggered by noise or owner departure.

5. CONTRAINDICATIONS

The dog should not be given Tessie if it:

- is allergic to tasipimidine or any of the other ingredients of this medicine

- has a severe disease such as liver, kidney or heart disease
- is obviously sedated (shows signs of e.g. drowsiness, uncoordinated movements, decreased responsiveness) due to previous medication.

See section 12 Pregnancy and lactation.

6. ADVERSE REACTIONS

Tessie may cause the following adverse reactions:

Very common:

- tiredness
- vomiting.

Common:

- drowsiness
- behavioural disorders (barking, avoidance, disorientation, increased reactivity)
- paleness of the mucous membranes
- ataxia
- diarrhoea
- uncontrolled urination
- nausea
- gastroenteritis
- excessive thirst
- low white blood cell count
- allergic reactions
- loss of appetite.

In addition, decrease in heart rate, blood pressure and body temperature may occur.

The frequency of adverse reactions is defined using the following convention:

- very common (more than 1 in 10 animals treated displaying adverse reactions)
- common (more than 1 but less than 10 animals in 100 animals treated)
- uncommon (more than 1 but less than 10 animals in 1,000 animals treated)
- rare (more than 1 but less than 10 animals in 10,000 animals treated)
- very rare (less than 1 animal in 10,000 animals treated, including isolated reports).

If you notice any side effects, even those not already listed in this package leaflet or you think that the medicine has not worked, please inform your veterinary surgeon.

7. TARGET SPECIES

Dogs

8. DOSAGE FOR EACH SPECIES, ROUTE(S) AND METHOD OF ADMINISTRATION

The recommended dose is 0.1 ml/kg. The veterinarian has prescribed the correct dose for the dog. Administer the product orally.

9. ADVICE ON CORRECT ADMINISTRATION

The product is intended for short term use. If needed, it can be safely administered for up to 9 consecutive days.

Do not feed the dog for one hour before to one hour after treatment as absorption may be delayed. A small treat can be given to ensure that the dog swallows the solution. Water can be freely available.

Test dose:

When giving the very first dose, observe the dog for 2 hours to make sure that the dose is not too high for the dog. If the dog appears drowsy, its movements are uncoordinated or it responds to your call abnormally slowly after receiving treatment, the dose could be too high. In such case do not leave the dog alone and contact your veterinarian for possible dose reduction for the next use.

Anxiety and fear triggered by noise:

Give the first dose one hour before expected start of the noise or as soon as the dog shows the first signs of anxiety. Observe the dog. If the noise continues and the dog starts to show signs of anxiety and fear again, a new dose can be given when at least 3 hours has passed from the previous dose. The product can be given up to 3 times within every 24 hours.

Anxiety and fear triggered by owner departure:

Give the dose one hour before leaving the dog alone. A new dose can be given when at least 3 hours has passed from the previous dose. The product can be given up to 3 times within every 24 hours.

See the detailed instructions for administration at the end of this leaflet.

10. WITHDRAWAL PERIOD(S)

Not applicable.

11. SPECIAL STORAGE PRECAUTIONS

Keep out of the sight and reach of children.

Store in a refrigerator (2°C to 8°C). Keep the bottle in the outer carton in order to protect from light.

Do not use this veterinary medicinal product after the expiry date which is stated on the carton and bottle label after EXP. The expiry date refers to the last day of that month.

Shelf life after first opening the bottle is 12 months in a refrigerator (2°C to 8°C) or 1 month below 25°C.

12. SPECIAL WARNINGS

Special precautions for use in animals:

Typical signs of anxiety and fear are panting, trembling, pacing (frequent change of place, running around, restlessness), seeking people (clinging, hiding behind, pawing, following), hiding (under furniture, in dark rooms), trying to escape, freezing (absence of movements), refusing to eat food or treats, inappropriate urination, inappropriate defecation, salivation, etc. These signs may be alleviated but may not be completely eliminated.

In extremely nervous, excited or agitated animals, the response to the medicine may be reduced.

Consideration should be given to use of a behavioural modification programme, especially when dealing with a chronic condition such as separation anxiety.

The safety of administering tasipimidine to puppies younger than 6 months and dogs over 14 years of age or weighing less than 3 kg has not been studied.

If the dog is drowsy, do not leave it alone, do not give food or water and keep it warm.

Always maintain the minimum interval (3 hours) between two doses even if the dog vomits after receiving Tessie.

Pregnancy and lactation:

The safety of this veterinary medicinal product has not been established during pregnancy and lactation in the dog. Do not use the product during pregnancy and lactation.

Interaction with other medicinal products and other forms of interaction:

Inform your veterinary surgeon if the dog is using other medicines.

The use of other central nervous system depressants is expected to potentiate the effects of tasipimidine and therefore an appropriate dose adjustment should be made by the veterinary surgeon.

Overdose (symptoms, emergency procedures, antidotes):

Overdose can cause drowsiness, lowering of heart rate, blood pressure and body temperature. If this occurs the animal should be kept warm.

If an overdose occurs, contact a veterinary surgeon as soon as possible.

The effects of tasipimidine can be eliminated using a specific antidote (reversal medicine).

Information for the veterinary surgeon:

The level and duration of sedation is dose dependent, and signs of sedation may therefore particularly occur in case the dose is exceeded. Dogs receiving a high overdose of the product have a higher risk of aspirating vomit due to the emetic and CNS depressant effects associated with the active substance. A very high overdose can potentially be life-threatening.

Reduced heart rate may be seen after administration of higher than recommended doses of Tessie. Blood pressure decreases slightly below normal levels. Respiration rate can occasionally decrease. Higher than recommended doses of Tessie may also induce a number of other alpha-2 adrenoceptor mediated effects, which include increase in blood pressure, decrease in body temperature, lethargy, vomiting and a QT prolongation.

As demonstrated in a preclinical study, the effects of tasipimidine can be reversed using a specific antidote, atipamezole (alpha-2 adrenoceptor antagonist). One hour after treatment with tasipimidine at 60 µg/kg body weight, an atipamezole dose of 300 µg/kg bodyweight, corresponding to 0.06 ml/kg bodyweight of solution containing 5 mg/ml, was administered i.v. Results of this study demonstrated that the effects of tasipimidine could be reversed. However, as the half-life of tasipimidine exceeds that of atipamezole, some signs of tasipimidine effects may reappear.

Special precautions to be taken by the person administering the veterinary medicinal product to animals:

Exposure to tasipimidine may cause adverse effects such as drowsiness, decrease in respiratory rate and volume, lowering of heart rate and blood pressure.

Avoid oral ingestion and skin contact including hand-to-mouth contact.

In order to prevent children from getting access to the product, don't leave the filled dosing syringe unattended while preparing the dog for administration. The used syringe and the closed bottle should be returned to the original carton and stored (in the refrigerator) out of the sight and reach of children.

In case of skin contact, wash the exposed skin immediately with water and remove contaminated clothes. In case of accidental ingestion, seek medical advice immediately and show the package leaflet or the label to the physician. Do not drive, as drowsiness and changes in blood pressure may occur.

This product may cause slight eye irritation. Avoid eye contact including hand-to-eye contact. In case of eye contact, rinse the eyes immediately with water.

This veterinary medicinal product may cause hypersensitivity (allergy). People with known hypersensitivity to tasipimidine or any of the excipients should avoid contact with the veterinary medicinal product.

Wash hands after use.

13. SPECIAL PRECAUTIONS FOR THE DISPOSAL OF UNUSED PRODUCT OR WASTE MATERIALS, IF ANY

Medicines should not be disposed of via wastewater or household waste. Ask your veterinary surgeon or pharmacist how to dispose of medicines no longer required. These measures should help to protect the environment.

14. DATE ON WHICH THE PACKAGE LEAFLET WAS LAST APPROVED

Detailed information on this veterinary medicinal product is available on the website of the European Medicines Agency (<http://www.ema.europa.eu/>).

15. OTHER INFORMATION

INSTRUCTIONS FOR ADMINISTRATION:

1. REMOVE CAP

Remove the cap from the bottle (press down and twist). Save the cap for reclosure.

2. CONNECT SYRINGE

Push the syringe tightly into the adapter located at the top of the bottle. Use only the syringe provided with the product.

3. SELECT DOSE

Turn the bottle with the syringe in place upside down. Pull the plunger out until the black line of correct dose (ml) (prescribed by your veterinarian) can be seen under the grip plate of the syringe barrel.

If the dog weighs more than 30 kg, the total dose will be given in two separate doses as the syringe holds maximally 3.0 ml of solution.

The accuracy of the syringe is demonstrated only for doses of 0.2 ml and higher. Dogs requiring doses lower than 0.2 ml can therefore not be treated.

Don't leave the filled dosing syringe unattended while preparing the dog for administration.

4. GIVE DOSE

Gently place the syringe in the mouth of the dog and administer the dose to the base of the tongue by gradually pressing the plunger until the syringe is empty. Give the dog a small treat to ensure that the dog swallows the solution.

5. BACK TO PACKAGE

Replace the cap and rinse the syringe with water when finished. Put the syringe and bottle back to the secondary package and put them in the refrigerator.

Pack size:

Cardboard box containing one 15 ml bottle and an oral syringe.
