

1 5 July 2021  
2 EMA/63454/2021

The VGVP draft modules are released for consultation and may change further, pending the finalisation and publication of the Implementing Regulation laying down rules for the application of Regulation (EU) 2019/6 of the European Parliament and of the Council as regards good pharmacovigilance practice and on the format, content and summary of the pharmacovigilance system master file for veterinary medicinal products.

3 **Guideline on veterinary good pharmacovigilance practices**  
4 **(VGVP)**  
5 **Module: Veterinary pharmacovigilance communication**  
6 **Draft**

Endorsed by Coordination group for Mutual recognition and Decentralised procedures (veterinary) for release for consultation	14 May 2021
Draft agreed by Committee for Medicinal Products for Veterinary Use (CVMP) Pharmacovigilance Working Party (PhVWP-V)	26 May 2021
Adopted by CVMP for release for consultation	17 June 2021
Start of public consultation	5 July 2021
End of consultation (deadline for comments)	5 September 2021

7  
8 Comments should be provided using this [template](#). The completed comments form should be sent to [Vet-Guidelines@ema.europa.eu](mailto:Vet-Guidelines@ema.europa.eu)

44

## 45 **1. Introduction**

46 Communication is a fundamental part of veterinary pharmacovigilance for promoting rational, safe and  
47 effective use of medicines for safeguarding animal and public health and the environment. In this  
48 module of the guideline on veterinary good pharmacovigilance practice (VGVP), communication refers  
49 to the active dissemination of veterinary pharmacovigilance information for an intended audience,  
50 particularly in the public domain, from marketing authorisation holders, competent authorities and the  
51 Agency with specific focus towards veterinarians.

52 This module describes the principles for best practice on communication on veterinary  
53 pharmacovigilance in the Union for marketing authorisation holders, competent authorities, the Agency  
54 and the Commission for safeguarding animal and public health and the environment. The principles for  
55 best practice on veterinary pharmacovigilance communication described in this module underpin the  
56 components of the overarching communication plan which is a legal requirement for marketing  
57 authorisation holders under the draft Commission Implementing Regulation (EU) .../... of XXX laying  
58 down rules for the application of Regulation (EU) 2019/6 of the European Parliament and of the Council  
59 as regards good pharmacovigilance practice and on the format, content and summary of the  
60 pharmacovigilance system master file for veterinary medicinal products [Article 20 of the Draft  
61 Commission Implementing Regulation]. This module also recommends that competent authorities and  
62 the Agency have an overarching communication plan. This should comprise the procedures and  
63 information required for communicating on veterinary pharmacovigilance issues in a timely manner to  
64 relevant stakeholders in the Union.

65 This module uses the term 'topic-specific communication plan' to describe how the overarching  
66 communication plan is applied in an individual situation when communication is required, specific to  
67 the circumstances. It provides a template (see Annex II of this module) for preparing a topic-specific  
68 communication plan. While this document is particularly relevant for communication in the event of  
69 potential need for urgent regulatory or other action, the principles and recommendations outlined  
70 should be considered best practice for communication under other circumstances.

71 Communication will be the principal mechanism used by competent authorities or the Agency when  
72 making recommendations or highlighting concerns on medicinal products for human use administered  
73 to animals, which is within the scope of the veterinary pharmacovigilance reporting requirements  
74 (Article 73(2)(g) of Regulation (EU) 2019/6).

75 This guidance will be reviewed and updated at regular intervals, or as required, on the basis of  
76 experience gained.

77 Routine communication, for example, update of product information to include new adverse events, is  
78 addressed as part of general pharmacovigilance procedures in place for marketing authorisation  
79 holders and competent authorities and the Agency, alike, and is not the subject of this module. Also  
80 out of scope of this module are responses to individual requests for information on pharmacovigilance  
81 issues received by marketing authorisation holders, competent authorities or the Agency; or  
82 communication with individuals about the treatment or management of adverse events e.g.  
83 veterinarian or client queries received by marketing authorisation holders and competent authorities.  
84 Promotion of veterinary medicinal products (as described in Article 119 of Regulation (EU) 2019/6) is  
85 also out of scope of this module. Furthermore, communication, in this context, is distinct from  
86 transparency, which aims to provide public access to information related to data assessment, decision-  
87 making and safety monitoring performed by competent authorities.

88 This module must be read in conjunction with Regulation (EU) 2019/6 of the European Parliament and  
89 of the Council of 11 December 2018 on veterinary medicinal products and repealing Directive

90 2001/82/EC and Commission Implementing Regulation (EU) .../... of XXX laying down rules for the  
91 application of Regulation (EU) 2019/6 of the European Parliament and of the Council as regards good  
92 pharmacovigilance practice and on the format, content and summary of the pharmacovigilance system  
93 master file for veterinary medicinal products (reference to be updated when available).

## 94 **2. Principles for good veterinary pharmacovigilance commu-** 95 **nication**

96 The principles described in this section under points 2.1.1-2.1.7 should be considered throughout the  
97 process of communicating on veterinary pharmacovigilance and applied as part of veterinary good  
98 pharmacovigilance practice. This entire process includes the preparation, dissemination, and follow-up  
99 of communication. Where necessary, based on sound judgement and experience, the principles may be  
100 adapted as required to address the specific needs for communicating on a particular veterinary  
101 pharmacovigilance issue.

102 The overriding principle of pharmacovigilance communication is to deliver relevant, clear, accurate,  
103 consistent, and timely messages to the right audience so they can take appropriate action. Effective  
104 veterinary pharmacovigilance communication can strengthen and support public confidence in the  
105 regulatory system and is in line with the principles of transparency on veterinary medicinal products.

106 There should be consultation, collaboration and coordination between the marketing authorisation  
107 holder(s) and the regulatory authorities (and other partners as appropriate) while preparing  
108 communication, as this is considered beneficial to all parties involved and crucial for delivering  
109 consistent information through the Union.

110 When making a public announcement (i.e. public communication) on pharmacovigilance marketing  
111 authorisation holders shall notify the relevant competent authorities or the Agency of their intention to  
112 do so, preferably in advance, however, at least simultaneously to the announcement (Article 77(11) of  
113 Regulation (EU) 2019/6). Similarly, competent authorities and the Agency shall notify respective  
114 marketing authorisation holders in a timely manner when they communicate publicly on veterinary  
115 pharmacovigilance, preferably in advance of, however, at least simultaneously to the public  
116 communication (Article 79(3) of Regulation (EU) 2019/6).

117 All pharmacovigilance communication should comply with relevant requirements relating to individual  
118 data protection and confidentiality.

119 In accordance with the quality system requirements in the VGVP module on pharmacovigilance  
120 systems and their pharmacovigilance system master files and quality management systems  
121 (EMA/257136/2021), procedures should be in place to ensure that veterinary pharmacovigilance  
122 communication complies with the guidance in this section, as appropriate. Veterinary  
123 pharmacovigilance communication should be subject to quality controls to ensure this.

### 124 **2.1.1. Clear objectives of communication**

125 Veterinary pharmacovigilance communication aims to:

- 126 • provide timely information to, and raise awareness within, the targeted audience about the safe  
127 and effective use of veterinary medicinal products used in animals;
- 128 • enable informed decisions to be taken on the rational use of veterinary medicinal products (or me-  
129 dicinal products for human use) in animals;
- 130 • support risk management throughout the continuous benefit-risk evaluation process; and
- 131 • enhance collection of information from the targeted audience(s).

## 132 **2.1.2. Determining timing for communication**

133 The need for communicating veterinary pharmacovigilance information should be considered  
134 throughout pharmacovigilance and benefit-risk evaluation processes.

135 As a general principle, communication on the basis of evaluation of pharmacovigilance data should be  
136 considered when there is new important information to be conveyed on adverse events relating to the  
137 veterinary medicinal products (or medicinal products for human use administered to animals) affecting  
138 exposed animals or humans or the environment which needs to be communicated more urgently than  
139 through a routine update to the product information.

140 Communication should generally be coordinated in a timely manner with the corresponding  
141 recommendation from the pharmacovigilance (e.g. signal management, see VGVP module on signal  
142 management (EMA/307620/2021)) or regulatory procedure. However, exceptionally (e.g. in the case  
143 of an urgent safety issue, i.e. in the event of a risk to public or animal health or to the environment  
144 that requires urgent action (Article 129(1) of Regulation (EU) 2019/6)) it may be necessary to  
145 disseminate information before completion of the regulatory procedure.

146 A competent authority or the Agency may disseminate or request the marketing authorisation holder to  
147 disseminate communication in any situation where considered necessary for safe and effective use of  
148 the veterinary medicinal product(s).

149 In principle, significant new or emerging information should be brought to the attention of  
150 veterinarians and other animal healthcare professionals before animal owners or other users of the  
151 veterinary medicinal product, in order to enable them to take action and respond adequately and  
152 promptly.

153 Veterinary and other animal healthcare professionals (see VGVP Glossary (EMA/118227/2021)) in  
154 clinical practice and those involved in clinical trials should be provided with appropriate veterinary  
155 pharmacovigilance information at the same time.

## 156 **2.1.3. Clarity of communication (content and presentation)**

### 157 **2.1.3.1. Content**

158 The information should not be misleading or contain any material or statement considered to be  
159 promotional or commercial. The following should be taken into account concerning the content of  
160 veterinary pharmacovigilance communication:

- 161 • The reason for initiating the communication should be explained, for example:
- 162 – Important new veterinary pharmacovigilance information which impacts the benefit-risk  
163 balance of a veterinary medicinal product for animal or public health, user safety or the  
164 environment.
  - 165 – Important new veterinary pharmacovigilance information concerning medicinal products for  
166 human use administered to animals.
  - 167 – Information on the important changes to the product information of a veterinary medicinal  
168 product on the basis of pharmacovigilance.
  - 169 – Regulatory action, for example, suspension, withdrawal, revocation of the marketing  
170 authorisation based on the changes to the benefit-risk balance of the veterinary medicinal  
171 product, restriction in availability or discontinuation of a medicine with potential detrimental  
172 effects on animal or public health or the environment.

- 173 • The information should objectively describe the risks in the context of the overall benefits of the  
174 medicinal product
- 175 – relevant information on adverse events may include the severity, frequency, risk factors, time  
176 to onset, reversibility (including potential treatment of clinical signs) and expected time for  
177 recovery;
- 178 – use appropriate quantitative measures when describing and comparing risks e.g. simple  
179 descriptive statistics, such as frequencies, the use of absolute risks and not just relative risks;
- 180 – present denominators (i.e. estimated number of animals treated), where available, and when  
181 comparing risks, ensure denominators are comparable;
- 182 – consider using visual and graphical forms of reporting, including statistical presentation of the  
183 risks and/or the benefit-risk balance;
- 184 – acknowledge uncertainties related to a pharmacovigilance concern including whether there is  
185 insufficient information currently available to conclude on potential causal relationships with  
186 the product(s)/product class.
- 187 • Recommendations on how to deal with the information should be provided, if possible and  
188 appropriate, e.g. actions to be taken to minimise risks:
- 189 – Information on competing risks, such as the risk of non-treatment or off-label use, and  
190 whether alternative products may or may not be available.
- 191 – Specify whether the treatment course should be completed to avoid causing possible harm to  
192 the animal if treatment is not continued.
- 193 – Information on any proposed change to the product information.
- 194 • Where relevant, a reminder to report adverse events in accordance with national requirements.
- 195 • Contact points (e.g. websites, telephone numbers et cetera) should be provided at the end of the  
196 communication, when relevant, for:
- 197 – pharmacovigilance/adverse event reporting; and
- 198 – further information, if different from the pharmacovigilance contact point.
- 199 • Any other additional information about the issue or use of the medicinal product or other data that  
200 may be relevant for tailoring the message to the targeted audience. If relevant, literature  
201 references should be annexed or linked.

### 202 **2.1.3.2. Presentation of information**

- 203 • Communication should be as clear and concise as possible to ensure the key messages are  
204 delivered effectively.
- 205 • Language should be tailored appropriately to the audience (e.g. veterinarians and other animal  
206 healthcare professionals, animal owners/carers etc.) taking account of the different levels of  
207 knowledge and information needs whilst maintaining the accuracy and consistency of the  
208 information conveyed ([EMA medical terms simplifier \(europa.eu\)](https://www.europa.eu/ema/medterms-simplifier)).
- 209 • Other editorial considerations include the following:
- 210 – It may be useful to refer at least once to the recommended international non-proprietary name  
211 (rINN) or other active substance name as well as the medicinal product brand name.

- 212 – Use active sentences rather than passive (e.g. change “veterinarians were requested to  
213 complete a questionnaire” to “veterinarians completed a questionnaire”).
- 214 – Avoid abbreviations that may be unfamiliar to veterinarians and other animal healthcare  
215 professionals; if they are necessary, spell them out first time and include the abbreviation in  
216 brackets after.
- 217 – Avoid over-use of bold and italics for emphasis, which can be difficult to read.

#### 218 **2.1.4. Identifying the target audience and stakeholders facilitating** 219 **information dissemination**

220 The main target audience for veterinary pharmacovigilance communication comprises veterinarians  
221 and other animal healthcare professionals, including people who handle, dispense or administer the  
222 veterinary medicinal product (or medicinal products for human use administered to animals).

223 Animal owners, carers or keepers are also a target audience for pharmacovigilance communication, as  
224 they have a vested interest in the safe and effective use of veterinary medicinal products. This  
225 audience is particularly important when communication concerns non-prescription, over-the counter  
226 products.

227 Other organisational bodies can act as information multipliers, by disseminating important information  
228 to the target audiences. These include, for example, Veterinary Statutory Bodies (VSBs), professional  
229 veterinary associations or federations; veterinary colleges; health ministries; public and animal health  
230 agencies; authorities for food safety; agricultural associations; breeder associations and animal welfare  
231 organisations.

232 The media may also be a target audience for communication. The capacity of the media to reach the  
233 general public in particular, in addition to veterinarians and other animal healthcare professionals, is a  
234 critical element for amplifying new and important veterinary pharmacovigilance information, in  
235 particular where there may be animal and public health implications. The way veterinary  
236 pharmacovigilance information is communicated through the media impacts public perception and it is  
237 therefore vital that the media receives information directly from regulatory authorities in addition to  
238 the information they receive from other sources.

#### 239 **2.1.5. Selecting appropriate communication tools and channels**

240 Consideration should be given to the most effective tools for communication of veterinary  
241 pharmacovigilance issues to reach the intended target audience.

242 The variety of tools used for communication continues to evolve and it is important to be aware of new  
243 developments in communication technologies and how audiences access information (for example,  
244 particular media channels or publications, such as open access journals, may be more frequently  
245 accessed by veterinarians). Liaison with communication or stakeholder departments within  
246 organisations may be helpful for this purpose.

247 Some examples of communication are provided here, however, particular focus is given to direct  
248 animal healthcare professional communication since this is one area in particular where Union-level  
249 guidance has been needed for some time, whilst acknowledging that direct animal healthcare  
250 professional communications are not foreseen to be used frequently.

251 **2.1.5.1. Direct animal healthcare professional communication or 'Dear Dr/DVM letters'**

252 Direct animal healthcare professional communication is a risk minimisation tool for communication of  
253 important, and potentially new, veterinary pharmacovigilance information directly to individual  
254 veterinarians and other animal healthcare professionals by a marketing authorisation holder, a  
255 competent authority or the Agency. [Annex I](#) of this module provides a template for use when preparing  
256 a direct animal healthcare professional communication.

257 Direct animal healthcare professional communications are sent out when veterinarians and other  
258 animal healthcare professionals need to be provided with specific advice, recommendations or  
259 information regarding a veterinary pharmacovigilance concern, in particular which may require them to  
260 take certain action or adapt their practices in relation to administration of a medicinal product for use  
261 in animals.

262 Direct animal healthcare professional communication preparation involves cooperation between  
263 marketing authorisation holders and competent authorities. Direct animal healthcare professional  
264 communications prepared by marketing authorisation holders, under their own initiative or upon  
265 request, should be agreed by the competent authorities or the Agency before dissemination. A  
266 statement on the agreement between the marketing authorisation holder and the competent authority  
267 on the information provided should be included in the direct animal healthcare professional  
268 communication.

269 In addition to dissemination to veterinarians and other animal healthcare professionals, direct animal  
270 healthcare professional communications should be published according to an agreed timetable on  
271 websites of the concerned competent authority and marketing authorisation holder(s), as applicable,  
272 and via any other communication tool which appears useful in the specific situation.

273 **2.1.5.2. Bulletins and newsletters**

274 Bulletins and newsletters provide useful summaries of veterinary pharmacovigilance information at  
275 regular intervals, in particular for veterinarians. They are suitable platforms for describing trends,  
276 reporting on new emerging safety issues, or highlighting information in a wider context of issues  
277 relating to veterinary medicinal products.

278 **2.1.5.3. Websites**

279 Websites should enable easy direct access to documents and information published on them, by  
280 navigation from the respective home page and also via internet search engines. The information  
281 published should be understandable by the public. When publishing veterinary pharmacovigilance  
282 information on websites, appropriate links, and/or contact details, should be provided to facilitate  
283 adverse event reporting. It is important to ensure information on websites is kept up to date.

284 Regulatory authority websites should serve as the authoritative reference point (or 'go-to') for  
285 information on veterinary pharmacovigilance. Examples of documents published on regulatory  
286 authority websites include regular summaries of adverse event reports and direct animal healthcare  
287 professional communications agreed by competent authorities. Direct animal healthcare professional  
288 communications agreed by the Agency will be published on the Agency website.

289 **2.1.5.4. Online/digital communication including social media**

290 Online platforms, including social media, and other digital tools may also be useful for disseminating  
291 veterinary pharmacovigilance communication. When using newer, more rapid communication channels,  
292 special attention should be paid to ensure that the accuracy of the information released is not

293 compromised and the language used is appropriate for the audience. Communication practices should  
294 take into account emerging digital communication tools used by the various target audiences.

#### 295 **2.1.5.5. Press communication**

296 Press communication involves tools such as press releases and briefings primarily intended for  
297 journalists and the general public. Press releases prepared and published by marketing authorisation  
298 holders should make reference to the regulatory action taken by the competent authority or the  
299 Agency.

300 Since press releases will also be read by other audiences such as veterinarians and other animal  
301 healthcare professionals and the general public, reference should be made to related communication  
302 materials on the topic. In cases where direct animal healthcare professional communications are also  
303 prepared, veterinarians and animal healthcare professionals should ideally receive these  
304 communications prior to or around the same time of the publication or distribution of a press release  
305 so that they are prepared to respond to potential queries.

306 Press briefings and public meetings should be considered by competent authorities of the Agency for  
307 safety concerns or other matters relating to the safety of medicinal products that are of high media  
308 interest or when complex or animal or public health-sensitive messages need to be conveyed.

#### 309 **2.1.5.6. Coordinated inter-agency communication tools: 'Lines to take' documents**

310 'Lines to take' documents are prepared when coordination of communication cross the Union is  
311 necessary. They are not intended for publication. Usually they are prepared by one regulatory  
312 authority to assist other regulators in answering enquires or communicating on a specific  
313 pharmacovigilance issue in a consistent manner, particularly where coordination is required within the  
314 regulatory network. This is particularly important for, but not limited to, management of incidents or  
315 potential crises<sup>1</sup>. Although not for publication, they should only contain information that can be  
316 released on request (i.e. not confidential information). 'Lines to take' should be prepared in a very  
317 short timeframe (usually a few hours) and circulated to the network promptly.

#### 318 **2.1.5.7. Other means of communication**

319 In addition to those discussed above, other tools and channels include, for example, publications in  
320 scientific journals and journals of professional bodies, lectures at universities or professional bodies,  
321 scientific conferences.

#### 322 **2.1.6. Setting a timetable for communication**

323 A timetable should be determined for each communication initiative. Timetables should detail all the  
324 relevant timelines required for preparation and management of the communication (e.g. including the  
325 internal review, quality control and approval process; approval by competent authorities and the  
326 Agency; translation of communication, as required; dissemination; and follow-up measures required to  
327 monitor effectiveness). The timetable should be agreed in advance between the marketing  
328 authorisation holder, the competent authority, and the Agency, as required, and should be respected  
329 by all partners. However, a proactive and pragmatic approach should be taken if, for example, delays  
330 occur, which should be communicated promptly to the concerned parties.

<sup>1</sup> Incident management plan for medicines for veterinary use (EMA/711053/2010-Rev.2) [https://www.ema.europa.eu/en/documents/other/incident-management-plan-medicines-veterinary-use\\_en.pdf](https://www.ema.europa.eu/en/documents/other/incident-management-plan-medicines-veterinary-use_en.pdf)

### 331 **2.1.7. Follow-up of communication and measuring its effectiveness**

332 Communication is considered effective when the message transmitted is received and understood by  
333 the target audience in the way it was intended, and appropriate action is taken by the target audience.  
334 The effectiveness of the communication should be measured. However, it should be acknowledged that  
335 in practice such assessment is difficult to make, and to interpret, and to ascribe to the communication  
336 initiative. Therefore, methods for measuring effectiveness should be practicable and proportionate in  
337 relation to the urgency and importance of the subject communicated. Consideration should be given to  
338 investigating:

- 339 • whether, and which proportion of, the target audience was reached (i.e. is the list of recipients  
340 accurate and up to date?);
- 341 • the timeliness of receipt of the communication;
- 342 • whether the communication tools used were appropriate; and
- 343 • whether the key message was understood and, where necessary, acted on or attitudes or  
344 behaviour changed in line with the message.

345 Examples of approaches to measure communication effectiveness include the following:

- 346 • Receipt of responses to the communication, if expected, which would require subsequent analysis  
347 and consideration.
- 348 • Data analyses in the Union pharmacovigilance database to monitor the development of certain  
349 adverse events requiring action or other safety measures, e.g. decrease in frequency of human  
350 adverse events following recommendations to wear gloves; decrease in fatalities in cats after  
351 information campaigns on the risks of permethrin.
- 352 • In the case of direct animal health care professional communications, marketing authorisation  
353 holders should inform the relevant competent authorities of the total number of veterinarians and  
354 animal healthcare professionals or veterinary practices targeted and the number that received the  
355 direct animal health care professional communications, e.g. after a defined number of delivery  
356 attempts, if necessary.

357 Where relevant, communication should be complemented at a later stage with follow-up  
358 communication, e.g. on the resolution of a safety concern or updated recommendations.

359 The evaluation of the effectiveness of communication should also ensure that lessons learned are  
360 considered and acted on. This is important to identify difficulties encountered during the process and  
361 enable recommendations for improvement to be made to the overarching communication plan and  
362 procedures for its implementation.

### 363 **2.1.8. Procedures for communication**

364 It is important to ensure procedures are in place concerning communication on pharmacovigilance is-  
365 sues, in particular, but not limited to, public announcements on pharmacovigilance [(Article 20(2)(g) of  
366 Implementing Regulation (reference to be updated when available); see also VGVP Module on Pharma-  
367 covigilance systems, their quality management systems and pharmacovigilance system master files  
368 (EMA/257136/2021)].

## 369 **3. Overarching and topic-specific communication plans**

### 370 **3.1. Overarching communication plan**

371 Marketing authorisation holders shall have an overarching communication plan that identifies the  
372 relevant stakeholders in the Union, including veterinarians, other healthcare professionals, customers  
373 and the general public [Article 20(1) of Implementing Regulation (reference to be updated when  
374 available)]. In cases of urgent safety concerns, it shall outline the approach to be taken to  
375 communicate in a timely manner concerns arising from pharmacovigilance data or in relation to other  
376 relevant pharmacovigilance information. [Article 20(1) of Implementing Regulation (reference to be  
377 updated when available)]

378 In practice, this means that marketing authorisation holders are required to have an overarching  
379 communication plan as part of their pharmacovigilance system (see VGVP module on  
380 pharmacovigilance systems and their pharmacovigilance system master files and quality management  
381 systems (EMA/618404/2020); Article 20(1) of Implementing Regulation (reference to be updated when  
382 available)].

383 Competent authorities and the Agency should also have an overarching communication plan in place.  
384 The overarching communication plan comprises the information and procedures required for  
385 communicating on veterinary pharmacovigilance issues in a timely manner to relevant stakeholders in  
386 the Union. Stakeholders include, but are not limited to, veterinarians and animals healthcare  
387 professionals, pharmacists, animal owners and the general public. Although primarily intended for  
388 communication of urgent safety concerns or where potential regulatory action may be required, based  
389 on pharmacovigilance data, the overarching communication plan may also be useful for addressing  
390 communication of non-urgent veterinary pharmacovigilance information. Whilst it is acknowledged that  
391 every eventuality cannot be addressed in the overarching communication plan, it should however  
392 contain the relevant information 'ready for use' when needed.

### 393 **3.2. Components of an overarching communication plan**

394 The overarching communication plan includes information on how the following will be determined, and  
395 the procedures to follow, when communication is required e.g. for dissemination of a direct animal  
396 health care practitioner communication to veterinarians following suspension of the marketing  
397 authorisation of a product following pharmacovigilance concerns (see also [Annex III](#) of this module  
398 which provides an example of the components of an overarching communication plan). The  
399 overarching communication plan comprises the necessary procedures and information required to  
400 determine and address the following [Article 20(2) of Implementing Regulation (reference to be  
401 updated when available)] :

- 402 1. Objectives.
- 403 2. Target audience.
- 404 3. Additional stakeholders involved in:
  - 405 3.1. preparing and approving the communication (e.g. marketing authorisation holders, compe-  
406 tent authorities and the Agency); and
  - 407 3.2. disseminating the communication (e.g. VSBs, veterinary associations etc.).
- 408 4. Tools for communication.
- 409 5. Means of dissemination.

- 410 6. Follow up and measuring effectiveness of communication.
- 411 7. Timetable.
- 412 8. Agreement on topic-specific communication plans prepared using the template in [Annex II](#) of this  
413 module, specific to the topic of communication.
- 414 9. Procedures in place for preparing and managing veterinary pharmacovigilance communication,  
415 should include, but not be limited to:
- 416 9.1. ensuring the relevance and clarity of the information for the target audience, in line with the  
417 requirements of the overarching communication plan outlined in this section, and the princi-  
418 ples in [Section 2](#) of this module;
- 419 9.2. ensuring timely notification of the intention to communicate on veterinary pharmacovigi-  
420 lance, in particular for public announcements, between marketing authorisation holders and  
421 competent authorities and the Agency, as applicable, and vice-versa; and
- 422 9.3. for competent authorities and the Agency, ensuring coordination of communication at Union  
423 level, when appropriate.

### 424 **3.3. Topic-specific communication plan**

425 As referred to in the introduction of this module, a template ([Annex II](#) of this module) for a topic-  
426 specific communication plan has been developed for use to detail how the overarching communication  
427 plan is applied when communication is required for a specific situation. The template should be used to  
428 detail the steps required, including projected time-lines, for preparing, disseminating and evaluating  
429 follow-up of communication, documented in a transparent way, for a specific communication initiative  
430 e.g. dissemination of a direct animal healthcare practitioner communication to veterinarians following  
431 suspension of the marketing authorisation of a product following pharmacovigilance concerns. The  
432 principles described in [Section 2](#) of this module should be considered, and judgement applied, for  
433 populating the template tailored to the specific situation. Deviations from the key principles described  
434 in this guidance should be documented for audit purposes and transparency. The topic-specific  
435 communication plan prepared using the template in [Annex II](#) of this module, specific to the particular  
436 initiative should be agreed with the relevant competent authority or the Agency prior to  
437 implementation and adhered to, as far as possible, by all parties. Where deviations from the agreed  
438 topic-specific communication plan occur, including delays, these should be communicated to all parties  
439 as soon as practicable.

### 440 **3.4. Quality control including maintenance**

441 Procedures should be in place to ensure that overarching communication plans address the relevant  
442 key principles in [Section 2](#) of this module.

443 Overarching communication plans should be subject to quality controls to ensure this and review of  
444 topic-specific communication plans (prepared in accordance with [Annex II](#) of this module) can be used  
445 to ascertain how the principles in the overarching communication plan are applied and followed. For  
446 this purpose, review procedures with allocated tasks and responsibilities should be documented and  
447 followed to ensure the principles are applied, as necessary, and to ensure accuracy, relevance and  
448 clarity of communication [Article 20(2)(e) of Implementing Regulation (reference to be updated when  
449 available)].

450 It is essential that the information contained in the overarching communication plan is kept up to date  
451 and relevant and therefore reviewed periodically. Evidence should also be retained of how

452 communication is distributed, how communication procedures and materials are reviewed (e.g. to  
453 ensure they are up to date and remain relevant) and updated, as required, ensuring appropriate  
454 version control.

#### 455 **4. Future steps**

456 It is foreseen that this guidance will be reviewed and updated at regular intervals, or as required, on  
457 the basis of experience gained.

#### 458 **Definitions**

459 Please refer to the VGVP Glossary (EMA/118227/2021) for relevant definitions.

## 460 **Appendix I: Template: Direct animal healthcare professional** 461 **communication<sup>2</sup>**

462 <Date>

463 **<Active substance, name of medicinal product and main message** (e.g.  
464 *introduction of a warning or a contraindication*)>

465 Dear Veterinarian <and animal healthcare professional – specify as required>

466 <Name of marketing authorisation holder> in agreement with <the European Medicines Agency> and  
467 the < Competent Authority > would like to inform you of the following:

### 468 **Summary**

469 *Guidance: This section should be in bullet points.*

- 470 • <Brief description of the safety concern in the context of the therapeutic indication,  
471 recommendations for risk minimisation (e.g. *contraindications, warnings, precautions of use*) and,  
472 if applicable, switch to alternative treatment>
- 473 • <Recall information, if applicable, including level (pharmacy) and date of recall>

### 474 **Background on the issue/concern**

475 *Guidance: This section may include the following information:*

476 <Brief description of the therapeutic indication of the veterinary medicinal product or administration of  
477 medicinal product for human use in animals>

478 <Important details about the safety concern (adverse event, severity, statement on the suspected  
479 causal relationship, and, if known, the pharmacodynamic mechanism, temporal relationship, positive  
480 re-challenge or de-challenge, risk factors)>

481 <An estimation of the frequency of the adverse event reporting with estimated animal  
482 exposure/denominator>

483 <A statement indicating any association between the adverse event and off-label use, if applicable>

484 <If applicable, details on the recommendations for risk minimisation>

485 <A statement if the product information is to be or has been revised, including a description of the  
486 changes made or proposed> *Guidance: No need to include or attach the precise (translated) text of*  
487 *the product information which, at the time of dissemination of the direct animal health care*  
488 *professional communication may not be available as final approved translations)*

489 <Place the risk in the context of the benefit>

490 <The reason for disseminating the direct animal health care professional communication at this point  
491 in time>

492 <Any evidence supporting the recommendation (e.g. include citation(s) of key study/ies)>

493 <A statement on any previous direct animal health care professional communications related to the  
494 current safety concern that have recently been disseminated>

<sup>2</sup> This template should also be used for the preparation of a core Union direct animal healthcare professional communication

495 <Any schedule for follow-up action(s) by the marketing authorisation holder/competent authority/the  
496 Agency, if applicable>

497 ***Call for reporting***

498 <A reminder of the need and how to report adverse events in accordance with the national reporting  
499 system, including the details (e.g. preferably electronic links/website address, name, postal address)  
500 on how to access the national reporting system>

501 <For immunological/biological medicinal products, also include a reminder to report the product name  
502 and batch details>.

503 <Mention if product is subject to additional surveillance requirements and the reason why>

504 ***Company contact point***

505 <Contact point details for access to further information, including relevant website address(es),  
506 telephone numbers and a postal address>

507 ***Annexes (if applicable)***

508 <Link/reference to other available relevant information, such as information on the website of a  
509 competent authority/the Agency>

510 <Additional scientific information, if applicable>

511 <List of literature references, if applicable>

512 **Appendix II: Template: Topic-specific communication plan**

<b>TOPIC-SPECIFIC COMMUNICATION PLAN FOR: &lt;Direct animal health care professional communication or other communication tool (to be specified)&gt; ON &lt;insert subject&gt;&gt;</b>	
<b>Medicinal product(s)/active substance(s)</b>	
<b>Marketing authorisation holder(s)</b>	<p><i>In cases where the communication concerns several marketing authorisation holders of the same active substance or is part of a class review, it is strongly encouraged that a single consistent message is sent to animal healthcare professionals in each Union Member State.</i></p> <p><i>All concerned marketing authorisation holders in each Member State are strongly encouraged to collaborate, so that a single communication is prepared and circulated in each Member State. The communication circulated in each Member State should cover all active substance-containing products authorised in that Member State.</i></p> <p><i>It is encouraged that the reference/originator marketing authorisation holder (where available) in each Member State acts as the contact point for the competent authority, on behalf of the other concerned marketing authorisation holders in the same Member State. If no reference product is marketed in the Member State, it is encouraged that one of the concerned generic companies acts as contact point for the competent authority.</i></p>
<b>Issue and objectives of the communication</b>	<p><i>Consider using the title of the communication to describe the concern</i></p>
<b>Target audience (to be specified) &lt;direct animal health care professional communication&gt; recipients</b>	<p><i>List all (groups of) recipients in this section, e.g. veterinarians, other animal healthcare professions, pharmacists, product wholesalers and distributors.</i></p>
<b>Member States where the communication &lt;to be specified&gt; will be distributed</b>	
<b>Stakeholders to coordinate with</b>	<p><i>Veterinary statutory bodies, specialist veterinary associations, associations of pharmacists, associations of veterinary medicinal product wholesalers or distributors.</i></p>
<b>Means of dissemination</b>	<p><i>Email, traditional post (e.g. via courier), publication in press, webpages. This may vary in different Member States</i></p>
<b>Follow-up and measurement of effectiveness</b>	<p><i>Specify measures for measuring effectiveness e.g. responses required, surveys to conduct, need for follow-up communication.</i></p>

513

<b>Timetable</b> <i>(Delete steps which are not applicable)</i>	<b>Date</b>
<b>Preparation of draft &lt;direct animal health care professional communication or other communication tool to be specified&gt;</b>	
<b>Consultation on draft &lt;communication tool to be specified&gt; with involved partners (to be specified as necessary)</b>	
<b>Submission of draft &lt;communication tool to be specified&gt; and topic-specific communication plan to &lt;the rapporteur, RMS or LMS, as applicable/competent authorities/Agency (to be specified)&gt;</b>	
<b>Draft &lt;communication tool to be specified&gt; and topic-specific communication plan agreed by rapporteur, RMS or LMS, as applicable</b>	
<b>If coordinated communication required, draft &lt;communication tool to be specified&gt; and topic-specific communication plan (in English) agreed by PhVWP-V</b>	
<b>Submission of translations to the competent authorities for review</b>	
<b>Agreement of translations by competent authorities</b>	
<b>Dissemination of &lt;communication tool to be specified&gt;</b>	
<b>Evaluation of effectiveness (measure to be specified)</b>	
<b>Follow up required (measure to be specified)</b>	
<b>Lessons learned and recommendations (to be specified)</b>	

514

515 **Appendix III: Example of components of an overarching communication plan**

Overarching communication plan component	Sub-categories or examples	Further details
1. <b>Objectives of communication</b>		Key messages (or core key messages) to be defined
	Urgent regulatory action proposed by marketing authorisation holder (MAH)	
	Urgent regulatory action intended by competent authority/Agency	
	Urgent safety concern possibly impacting benefit-risk balance	
	Other veterinary pharmacovigilance issue including non-urgent issues	
	Etc.	
2. <b>Target audience</b>		<b>How to contact (examples) N.B. Liaison and cooperation between competent authorities and MAHs is advisable (preferably in advance of communication) concerning the organisations below and particularly in case of any problems encountered</b>
	Veterinarians	Veterinary statutory bodies (VSBs) or other animal healthcare professional body (e.g. National College of Veterinary Surgeons); Association of different veterinarian specialists (e.g. on equine, bovine, etc.).
	Other (non-veterinarian) animal healthcare professionals authorised to prescribe and administer veterinary medicinal products (VMPs) to animals	Other (non-veterinarian) animal healthcare professional associations
	Pharmacists and other professionals responsible for dispensing VMPs	Professional pharmacist associations
	VMP wholesalers and distributors	Customer database client list

Overarching communication plan component	Sub-categories or examples	Further details
	Animal owners/keepers – production animals	Professional agricultural organisations; Customer database client list
	Animal owners/keepers – companion animals	National breeders' associations, kennel clubs etc.
	Etc.	
<b>3. Additional stakeholders</b>		
	Veterinary statutory bodies	See contact information of the associations' website
	Associations of veterinarian specialists	
	Associations of pharmacists	
	Etc.	
<b>3.1. Stakeholder coordination</b>		Coordination via:
	Union competent authorities	Union pharmacovigilance database (e.g. pharmacovigilance alert system)
	European Medicines Agency	
	European Commission	
	Other (to be specified)	
<b>4. Tools for communication</b>		
	Direct animal healthcare professional communication	
	Animal owner communication (e.g. pamphlet or leaflet)	Package leaflets, articles in non-scientific journals for animal keepers, microblogs (e.g. Twitter)
	Press release	
	Lectures	At universities, scientific conferences etc.
	etc	
<b>5. Means of dissemination</b>		
	Email	
	Traditional post (with confirmation of receipt which should be retained for audit purposes)	

Overarching communication plan component	Sub-categories or examples	Further details
	Publication in press	
	Webpages	
	Etc.	
<b>6. Follow-up and measurement of effectiveness</b>	Criteria & methods for measuring effectiveness	
	Responses to communication	Receipt of responses if requested in the communication
	Conduct surveys	Surveys among target audience on usefulness of the communication
	Receipt of feedback	Questions, comments from target audience
<b>7. Timetable</b>	Include steps required for preparation, approval, dissemination and follow-up of communication (for use/deletion as required)	All relevant steps for preparation and management of the communication should be determined. Deadlines to be inserted for the relevant steps for communication plan (allowing for sufficient time for review). The timetable should be agreed in advance. Compliance with the timetable should be respected by all partners.
	Preparation of draft communication	Deletion of one or more step(s) is acceptable if required, e.g. in case of urgent safety issues when rapid communication is considered of vital importance.
	Consultation on draft with involved partners	
	Submission of communication e.g. Direct animal healthcare professional communication and topic-specific communication plan to competent authorities/Agency as applicable	

Overarching communication plan component	Sub-categories or examples	Further details
	Communication e.g. Direct animal healthcare professional communication and topic-specific communication plan (in English) to be agreed by PhVWP-V (where coordinated communication required)	
	Submission of translated communication <e.g. Direct animal healthcare professional communication> to the competent authorities for review	
	Agreement of translations by competent authorities	
	Dissemination of e.g. <Direct animal healthcare professional communication to veterinarians>	
	Follow-up of communication	Measures to be specified e.g.
	Measurement and evaluation of effectiveness	
	Confirmation of completion of communication initiative and provision of evaluation of effectiveness to competent authority or the Agency, as required.	
<b>8. Agreement on topic-specific communication plan</b>		Agreement should be attained with the relevant competent authority or the Agency prior to implementation.
<b>9. Procedures in place for veterinary pharmacovigilance communication</b>	Insert references to procedures to be followed	Should be subject to quality controls and review and updated in consideration of lessons learned, if applicable
<b>10. Quality control and lessons learned</b>	Analysis of the specific communication initiative	If applicable recommendation of changes to the topic-specific communication plan
	Implementation of lessons learned and corrective actions
