## Scientific recommendation on classification of advanced therapy medicinal products

Article 17 – Regulation (EC) No 1394/2007

**Disclaimer:** This document is a summary for public release of a scientific recommendation on classification of advanced therapy medicinal products. The original text adopted by the Committee for Advanced Therapies (CAT) has been redacted to delete commercially confidential information.

The present scientific recommendation refers exclusively to the case as presented to the European Medicines Agency (EMA) without prejudice to future evaluations by the Agency.

It is stressed that the scientific recommendation on advanced therapy classification does not amount to any endorsement of the plausibility of the product, including the mode of action or therapeutic indication(s) claimed by the applicant.

### **Brief description (or name when available) of the active substance(s)**

Mesenchymal stem cells isolated from autologous bone marrow.

### **Brief description of the finished product**

Mesenchymal stem cells isolated from autologous bone marrow.

### **Proposed indication**

Treatment of children neurological diseases: children encephalopathy (Hypoxic–ischaemic encephalopathy, immune/autoimmune encephalopathy), children epilepsy and children spinal cord injury.

### **EMA/CAT conclusion**

The procedure was finalised on 20 May 2016 for the following recommendation.

On the basis that:

- the product consist of cells that have been subject to substantial manipulation so that biological characteristics, physiological functions or structural properties relevant for the intended regeneration, repair or replacement are achieved;
  - the cells are administered to human beings with a view to regenerating or repairing human tissue,
- the EMA/CAT considers that the product falls within the definition of a tissue engineered product, as provided in Article 2(4) of Regulation (EC) 1394/2007.
