Scientific conclusions and grounds for the variation to the terms of the marketing authorisation(s)

Active substance(s): conestat alfa

Procedure No. EMEA/H/C/PSUSA/00000873/202210

Period covered by the PSUR: 28 April 2022 – 28 October 2022
**Scientific conclusions**

Taking into account the PRAC Assessment Report on the PSUR(s) for conestat alfa, the scientific conclusions of CHMP are as follows:

In view of available data on spontaneous reports including in some cases a close temporal relationship, and in view of a plausible mechanism of action, the PRAC considers a causal relationship between conestat alfa and

- Hypersensitivity reactions
- Anaphylaxis
- Thromboembolic events

is at least a reasonable possibility. The PRAC concluded that the product information of products containing conestat alfa should be amended accordingly.

The CHMP agrees with the scientific conclusions made by the PRAC.

**Grounds for the variation to the terms of the marketing authorisation(s)**

On the basis of the scientific conclusions for conestat alfa the CHMP is of the opinion that the benefit-risk balance of the medicinal product(s) containing conestat alfa is unchanged subject to the proposed changes to the product information.

The CHMP recommends that the terms of the marketing authorisation(s) should be varied.
