## 33 **Executive summary**

34 Regulation (EU) 2019/6 of the European Parliament and of the Council of 11 December 2018 on  
35 veterinary medicinal products and repealing Directive 2001/82/EC introduces specific provisions for  
36 applications for limited markets (Article 23).

37 The general aim of this guideline is to define acceptable data requirements for efficacy and target  
38 animal safety in case of marketing authorisation applications for non-immunological veterinary  
39 medicinal products intended for limited markets submitted under Article 23 of Regulation 2019/6.

40 It is the intention of the guideline to indicate which data requirements can be reduced for this type of  
41 applications; however, it is recognised that this is not always feasible as not all scenarios can be  
42 addressed in a general guidance document.

43 The data requirements for efficacy and target animal safety are presented in Sections 5 and 6 of the  
44 guideline.

## 45 **1. Introduction**

46 From 2006 to 2017, the CVMP developed guidelines on data requirements for MUMS/limited market  
47 veterinary medicinal products (VMPs) for quality, safety and efficacy for pharmaceuticals with the aim  
48 to stimulate research, development and innovation of new veterinary medicines intended for minor  
49 uses and minor species (MUMS/limited markets). Those guidelines were developed with the purpose of  
50 reducing data requirements, where possible, for products classified as MUMS/limited market while still  
51 providing assurance of appropriate quality, safety and efficacy and complying with the legislation in  
52 place and leading to an overall positive benefit-risk balance for the product.

53 Regulation (EU) 2019/6 of the European Parliament and of the Council of 11 December 2018 on  
54 veterinary medicinal products and repealing Directive 2001/82/EC introduces specific provisions for  
55 limited markets. The current limited markets guidelines have been drafted in line with the new legal  
56 provisions, including consideration of data requirements for biological VMPs other than immunological  
57 VMPs.

58 The general aim of this guideline is to define acceptable data requirements for efficacy and target  
59 animal safety for VMPs intended for limited markets submitted under Article 23 of Regulation 2019/6.

60 It is the intention of the guideline to indicate which data requirements can be reduced for applications  
61 submitted in accordance with Article 23 of Regulation (EU) 2019/6, to facilitate the applicant's work for  
62 estimating the required resources needed for a limited market application and preparing the  
63 application dossier, and provide for predictability. However, it is recognised that this is not always  
64 feasible as not all scenarios can be addressed in a general guidance document.

65 The requirements will depend on the product (active substance, mode of action) and the availability of  
66 information (published literature, data in other species, other indications). The data provided should be  
67 adequate to draw a conclusion of the benefit-risk balance of the product. The guidance provided in this  
68 document is general. Applicants are reminded that the Scientific Advice procedure is available to  
69 confirm precise requirements for a specific application.

## 70 2. Scope

71 This guideline applies to marketing authorisation applications for VMPs other than immunological VMPs  
72 (i.e. VMPs other than biological VMPs and biological VMPs other than immunological VMPs) intended for  
73 limited markets submitted under Article 23 of Regulation 2019/6.

74 According to the Annex II to Regulation (EU) 2019/6, a novel therapy VMP could also fall into the  
75 category of VMPs other than biological VMPs or in the category of biological VMPs other than  
76 immunological VMPs. Thus, the current guideline also applies to these cases.

77 The objective of this guideline is to clarify the requirements for applications for limited markets  
78 deemed eligible for consideration for authorisation under Article 23 of Regulation (EU) 2019/6.

79 For guidance on the approach to determining eligibility for authorisation under Article 23, and the type  
80 of products that may be considered eligible (or ineligible), the reader is referred to the EMA Reflection  
81 paper on classification of a product as intended for a limited market and eligibility for authorisation  
82 according to Article 23 (Applications for limited markets).

## 83 3. Definitions

84 • *Limited market* – according to Article 4(29) of Regulation (EU) 2019/6, 'limited market' means  
85 a market for one of the following medicinal product types:

86 (a) veterinary medicinal products for the treatment or prevention of diseases that occur  
87 infrequently or in limited geographical areas;

88 (b) veterinary medicinal products for animal species other than cattle, sheep for meat  
89 production, pigs, chickens, dogs and cats.

90 • *Clinical trial* - according to Article 4(17) of Regulation (EU) 2019/6, a 'clinical trial' is a study  
91 which aims to examine under field conditions the safety or efficacy of a veterinary medicinal  
92 product under normal conditions of animal husbandry or as part of normal veterinary practice  
93 for the purpose of obtaining a marketing authorisation or a change thereof.

94 • *Pre-clinical study* - according to Article 4(18) of Regulation (EU) 2019/6, a 'pre-clinical study' is  
95 a study not covered by the definition of clinical trial which aims to investigate the safety or  
96 efficacy of a veterinary medicinal product for the purpose of obtaining a marketing  
97 authorisation or a change thereof.

98 • *Biological veterinary medicinal products* – according to Article 4(6) of Regulation (EU) 2019/6,  
99 a 'biological veterinary product' means a veterinary medicinal product where an active  
100 substance is a biological substance. A 'biological substance' is defined as a substance that is  
101 produced by or extracted from a biological source and that needs for its characterisation and  
102 the determination of its quality a combination of physico-chemical-biological testing, together  
103 with knowledge of the production process and its control (Article 4(7) of Regulation (EU)  
104 2019/6).

105 • *Biological veterinary medicinal products other than immunological veterinary medicinal*  
106 *products* - this group contains all biological veterinary medicinal products with the exception of  
107 immunological veterinary medicinal products. According to Article 4(5) of Regulation (EU)  
108 2019/6, an 'immunological veterinary medicinal product' is a veterinary medicinal product  
109 intended to be administered to an animal in order to produce active or passive immunity or to  
110 diagnose its state of immunity.

- 111 • *Veterinary medicinal products other than biological veterinary medicinal products* - this group  
112 contains all veterinary medicinal products where the active substance is not a biological  
113 substance; these products were formerly known as “pharmaceuticals”.

## 114 **4. Legal basis**

115 Requirements for a marketing authorisation application are laid down in Article 8(1)(b) of Regulation  
116 (EU) 2019/6, and are specified in Annex II of Regulation (EU) 2019/6, Title I for veterinary medicinal  
117 products other than biological veterinary medicinal products and Title IIa for biological veterinary  
118 medicinal products other than immunological veterinary medicinal products.

119 One of the intentions of the legislation in place for the authorisation of veterinary medicines, as laid  
120 down in the preamble of Regulation (EU) 2019/6, recital no. 30, is to facilitate the authorisation of  
121 veterinary medicinal products intended for limited markets:

122 *“(30) Companies have less interest in developing veterinary medicinal products for markets of a  
123 limited size. In order to promote the availability of veterinary medicinal products within the Union for  
124 those markets, in some cases it should be possible to grant marketing authorisations without a  
125 complete application dossier having been submitted, on the basis of a benefit-risk assessment of the  
126 situation and, where necessary, subject to specific obligations. In particular, the grant of such  
127 marketing authorisations should be possible in the case of veterinary medicinal products for use in  
128 minor species or for the treatment or prevention of diseases that occur infrequently or in limited  
129 geographical areas.”*

130 In addition, Article 23 of Regulation (EU) 2019/6 introduces a specific legal basis for veterinary  
131 medicinal products intended for limited markets, also specifying the conditions which need to be  
132 fulfilled by applications for limited markets:

133 *“1. By way of derogation from point (b) of Article 8(1), the applicant shall not be required to provide  
134 the comprehensive safety or efficacy documentation required in accordance with Annex II, if all of the  
135 following conditions are met:*

136 *(a) the benefit of the availability on the market of the veterinary medicinal product to the animal or  
137 public health outweighs the risk inherent in the fact that certain documentation has not been provided;*

138 *(b) the applicant provides the evidence that the veterinary medicinal product is intended for a limited  
139 market.*

140 *2. Where a veterinary medicinal product has been granted a marketing authorisation in accordance  
141 with this Article, the summary of product characteristics shall clearly state that only a limited  
142 assessment of safety or efficacy has been conducted due to the lack of comprehensive safety or  
143 efficacy data.”*

144 This is also reflected in Annex II of Regulation (EU) 2019/6 under Title III (6) – *Applications for limited  
145 markets:*

146 *“A marketing authorisation may be granted for a limited market in the absence of comprehensive  
147 safety and/or efficacy data when, as provided for in Article 23 of this Regulation, the applicant can  
148 demonstrate that the product is intended for use in a limited market and that the benefit of availability  
149 of the new product outweighs the risk associated with the omission of some of the safety or efficacy  
150 data required by this annex.*

151 *For such applications, the applicant shall submit Parts 1 and 2 as described in this annex. For Parts 3  
152 and 4, some of the safety or efficacy data required by this annex may be omitted. As regards the*

153 *extent of safety and efficacy data that may be omitted, the relevant guidance published by the Agency*  
154 *shall be taken into account."*

## 155 **5. Preclinical requirements**

156 Pre-clinical studies aim to investigate the pharmacological activity, pharmacokinetic properties, dose  
157 and dosing interval, resistance (if applicable) and the target animal tolerance of the product.

158 Interspecies extrapolation of pre-clinical data to support applications for limited markets will be  
159 accepted whenever scientifically justifiable (where the pharmacology of the product is comparable  
160 between species).

161 Published literature concerning use of the active substance/product in the proposed or another target  
162 species, as well as from other use of the active substance, may be used for the preclinical  
163 documentation where scientifically justified. However, bibliographic data should be published by a  
164 reputable source, preferably peer-reviewed. Appropriate bibliography may include review articles.  
165 Inclusion of bibliographic data will, however, need a thorough evaluation as to the reliability and  
166 relevance of this information.

### 167 **5.1. Pharmacology**

168 The mode of action and the pharmacological effects on which the recommended application in practice  
169 is based, shall be adequately described, including secondary effects (if any).

170 Basic pharmacokinetic data on the active substance should be provided as a complement to the  
171 pharmacodynamic studies to support the establishment of the proposed dosage regimen (route and  
172 site of administration, dose, dosing interval, number of administrations, etc.).

173 Nevertheless, if data (dose confirmation/clinical study) is provided to characterise the efficacy and  
174 tolerance of the test product in terms of the proposed indication, posology and route(s) of  
175 administration, specific pharmacokinetic and pharmacodynamic data with the product can be omitted.

### 176 **5.2. Development of resistance or tolerance to the active substance**

177 Where relevant, information on the potential emergence of resistance or the development of tolerance  
178 to the active substance leading to a reduction in effectiveness for the claimed indication in the target  
179 animal species should be provided.

### 180 **5.3. Dose justification/confirmation**

181 Appropriate data should be provided to justify the proposed dose, dosing interval, duration of  
182 treatment and any re-treatment interval. In principle, specific dose justification and/or confirmation  
183 studies in an appropriate and relevant disease model or in naturally diseased animals should be  
184 provided to support the dose regimen of the VMP. For diseases/conditions for which an appropriate  
185 disease model does not exist, data relating to exploratory or pilot studies in the target animals (either  
186 proprietary data or from the published literature) should be provided.

### 187 **5.4. Target animal safety**

188 Appropriate data to characterise the tolerance of the target species to the test product following  
189 administration by the proposed route(s) should be provided. Typically, target animal tolerance (local  
190 and systemic) should be confirmed in healthy animals of the target species in a negative-controlled

191 target animal safety (TAS) study implemented under well-controlled laboratory conditions in line with  
192 the principles of VICH GL43 in order to characterise signs of intolerance and to establish an adequate  
193 margin of safety using the recommended route(s) of administration.

194 However, the absence of a VICH compliant TAS study may be accepted, if justified, where a  
195 comprehensive evaluation of target animal safety is possible by other means, foremostly based on data  
196 provided from exploratory and/or clinical studies following administration of the product at the  
197 recommended treatment dose and duration of therapy to an adequate number of animals representing  
198 the target (sub)species.

199 Tolerance may also be supplemented with reference to use in another relevant species in which  
200 tolerance is expected to be similar, data from toxicity studies in laboratory animals, literature reports  
201 and pharmacovigilance data.

## 202 **6. Clinical trials**

203 For products eligible for authorisation under Article 23 and where it is reasonable to conclude, based  
204 on the information provided in accordance with section 5 above, that:

- 205 • the product is safe for the target population when administered at the recommended treatment  
206 dose and by the proposed route(s) of administration, and
- 207 • the product is expected to be effective for the proposed indication in the target diseased  
208 animals (that is, there is a reasonable expectation of effectiveness),

209 the provision of comprehensive clinical documentation including confirmatory clinical trial data will not  
210 be required.

211 Exploratory/pilot studies, pre-clinical studies (e.g. dose determination or dose confirmation studies),  
212 data stemming from clinical trials conducted outside the Union along with relevant information from  
213 the published literature may be used to provide information to support the safety and expected efficacy  
214 of the product in the absence of comprehensive clinical documentation. However, in the absence of  
215 confirmatory clinical trials, the data provided should be adequate to allow a reasonable conclusion to  
216 be made on target animal safety and expected efficacy of the VMP.

## 217 **7. Summary of Product Characteristics**

218 Where a veterinary medicinal product has been granted a marketing authorisation in accordance with  
219 Article 23 of Regulation (EU) 2019/6, the summary of product characteristics shall clearly state that  
220 only a limited assessment of safety or efficacy has been conducted due to the lack of comprehensive  
221 safety or efficacy data. In line with Article 35(1)(j)(i) of Regulation (EU) 2019/6, the SPC will carry the  
222 following statement: "*marketing authorisation granted for a limited market and therefore assessment*  
223 *based on customised requirements for documentation*".
