Committee for Medicinal Products for Human Use (CHMP)

Summary of opinion¹ (initial authorisation)

Pemetrexed Sandoz

pemetrexed

On 23 July 2015, the Committee for Medicinal Products for Human Use (CHMP) adopted a positive opinion, recommending the granting of a marketing authorisation for the medicinal product Pemetrexed Sandoz, intended for the treatment of unresectable malignant pleural mesothelioma and locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology.

The applicant for this medicinal product is Sandoz GmbH.

Pemetrexed Sandoz will be available as a powder (100 mg, 500 mg and 1,000 mg) for concentrate for solution for infusion. The active substance of Pemetrexed Sandoz, pemetrexed, is a multi-targeted anti cancer antifolate agent (ATC code: L01BA04) that exerts its action by disrupting crucial folate dependent metabolic processes essential for cell replication.

Pemetrexed Sandoz is a generic of Alimta, which has been authorised in the EU since 20 September 2004. Studies have demonstrated the satisfactory quality of Pemetrexed Sandoz. Since Pemetrexed Sandoz is administered intravenously and is 100% bioavailable, a bioequivalence study versus the reference product Alimta was not required. A question and answer document on generic medicines can be found [here](#).

The full indication is:

"Malignant pleural mesothelioma

Pemetrexed Sandoz in combination with cisplatin is indicated for the treatment of chemotherapy naïve patients with unresectable malignant pleural mesothelioma.

Non-small cell lung cancer

Pemetrexed Sandoz in combination with cisplatin is indicated for the first line treatment of patients with locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology (see section 5.1).

¹ Summaries of positive opinion are published without prejudice to the Commission decision, which will normally be issued 67 days from adoption of the opinion

Pemetrexed Sandoz is indicated as monotherapy for the maintenance treatment of locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology in patients whose disease has not progressed immediately following platinum-based chemotherapy (see section 5.1).

Pemetrexed Sandoz is indicated as monotherapy for the second line treatment of patients with locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology (see section 5.1)."

It is proposed that Pemetrexed Sandoz be subject to prescription and administered under the supervision of physicians experienced in the use of anti-cancer chemotherapy.

Detailed recommendations for the use of this product will be described in the summary of product characteristics (SmPC), which will be published in the European public assessment report (EPAR) and made available in all official European Union languages after the marketing authorisation has been granted by the European Commission.
