## Summary of opinion<sup>1</sup> (post-authorisation)

---

### Activyl Tick Plus

International non-proprietary name (INN): indoxacarb / permethrin

On 12 April 2017, the Committee for Medicinal Products for Veterinary Use (CVMP) adopted a positive opinion<sup>2</sup>, recommending the granting of a variation to the terms of the marketing authorisation for the veterinary medicinal product Activyl Tick Plus. The marketing authorisation holder for this veterinary medicinal product is Intervet International B.V.

Activyl Tick Plus is currently authorised as spot-on solution with insecticidal and acaricidal activity in dogs. The variation concerns the addition of a new indication for repellent (anti-feeding) activity against sand flies (*Phlebotomus perniciosus*) for up to three weeks.

Detailed conditions for the use of this product are described in the updated summary of product characteristics (SPC), for which an updated version reflecting the changes will be published in the revised European public assessment report (EPAR) and will be available in all official European Union languages after the variation to the marketing authorisation has been granted by the European Commission.
