#### Memberships

#### Other Relevant Information

I have a longterm and passionate interest in children, young people and families in hospital settings. My career has always included work with and involving children, parents and families.

My main focus has been on anxiety in connection with surgery and anaesthesia. This work has been composed of clinical practice, research and teaching.

My clinical practice has always been the starting point for the research part of my career. The research I have conducted has focused on the development of measurement tools for evaluating outcomes in children and parents. My skills in this area have been built up through education, study stays abroad, close collaboration with clinical practice and a profound professional insight.

Today my focus is on better medicines for babies, children and young people.
