EMA Workshop on the collaboration with General Practitioners/Family Physicians

Presented by Isabelle Moulon on 19 April 2016  
Head of Patients and Healthcare Professionals Department

# Objectives

1. Discuss, on the basis of examples covering input into safety reviews, involvement in the review of product information and additional risk minimisation measures, how general practice has or could be impacted by regulatory actions
2. Identify what type of input collected at primary care level, would add value into the benefit-risk assessment once a medicinal product is introduced in the market and how this could be included into the regulatory decision-making process
3. Identify areas where collaboration would mutually benefit GPs and EMA
4. Investigate if a specific area and format of collaboration could be piloted with a group of GPs and how such group could be established as a pool of EMA experts
