

25 January 2018 EMA/CHMP/315234/2014/Rev.1[†] Committee for Medicinal Products for Human Use (CHMP)

Tadalafil film-coated tablets 2.5 mg, 5 mg, 10 mg and 20 mg product-specific bioequivalence guidance

Draft agreed by Pharmacokinetics Working Party (PKWP)	October 2013
Adoption by CHMP for release for consultation	24 October 2013
Start of public consultation	15 November 2013
End of consultation (deadline for comments)	15 February 2014
Agreed by Pharmacokinetics Working Party	29 April 2015
Adoption by CHMP	21 May 2015
Date for coming into effect	1 December 2015
Draft agreed by Pharmacokinetics Working Party (PKWP)	June 2017
Adoption by CHMP for release for consultation	20 July 2017
Start of public consultation	2 August 2017
End of consultation (deadline for comments)	31 October 2017
Agreed by Pharmacokinetics Working Party (PKWP)	December 2017
Adopted by CHMP	25 January 2018
Date of coming into effect	1 August 2018

 $^{\dagger} This revision concerns the addition of 'T_{max}' as an additional main pharmacokinetic variable in the bioequivalence assessment section of the guideline.$

Keywords	Bioequivalence, generics, tadalafil
•	

Tadalafil film-coated tablets 2.5 mg, 5 mg, 10 mg and 20 mg product-specific bioequivalence guidance

Disclaimer:

This guidance should not be understood as being legally enforceable and is without prejudice to the need to ensure that the data submitted in support of a marketing authorisation application complies with the appropriate scientific, regulatory and legal requirements.

Requirements for bioequivalence demonstration (PKWP)*

BCS Class: I I III II Neither of the two Background: tadalafil is considered a low solubility compound.
single dose cross-over
nealthy volunteers
☐ fasting ☐ fed
Background: The reference product can be taken with or without food according to the SmPC. Since the
pecific formulation (e.g. particle size and excipients) is known to be critical to the performance of the ormulation in fed conditions, it cannot be assumed that the impact of food will be the same regardless of
ormulation. Therefore, following the requirements for "specific formulation characteristics" described in the Guideline on Investigation of Bioequivalence, both fasted and fed state comparisons of test to reference

	formulations are required.	
	Strength: 20 mg Background: highest strength to be used for a drug with linear pharmacokinetics and low solubility.	
	Number of studies: two single dose studies (20 mg fasted and 20 mg fed)	
Analyte	⊠ parent □ metabolite □ both	
	⊠ plasma∕serum □ blood □ urine	
	Enantioselective analytical method: 🗌 yes 🛛 no	
Bioequivalence assessment	Main pharmacokinetic variables: AUC_{0-72h} , C_{max} and T_{max}	
	90% confidence interval: 80.00 – 125.00% for AUC _{0-72h} and C_{max} . Comparable median and range for T_{max} .	

* As intra-subject variability of the reference product has not been reviewed to elaborate this product-specific bioequivalence guideline, it is not possible to recommend at this stage the use of a replicate design to demonstrate high intra-subject variability and widen the acceptance range of C_{max} . If high intra-individual variability ($CV_{intra} > 30$ %) is expected, the applicants might follow respective guideline recommendations.

** This tentative BCS classification of the drug substance serves to define whether *in vivo* studies seems to be mandatory (BCS class II and IV) or, on the contrary, (BCS Class I and III) the Applicant may choose between two options: *in vivo* approach or *in vitro* approach based on a BCS biowaiver. In this latter case, the BCS classification of the drug substance should be confirmed by the Applicant at the time of submission based on available data (solubility experiments, literature, etc.). However, a BCS-based biowaiver might not be feasible due to product specific characteristics despite the drug substance being BCS class I or III (e.g. in vitro dissolution being less than 85 % within 15 min (BCS class III) or 30 min (BCS class I) either for test or reference, or unacceptable differences in the excipient composition).
